STUDY OF FIRST-YEAR 4-H CLUB LEADERS IN NEW YORK
STATE--TENURE, CHARACTERISTICS OF LEADERS AND EVALUATION OF
JOB PERFORMANCE BY 4-H AGENTS.
BY- ALEXANDER, FRANK D.
STATE UNIV. OF N.Y., ITHACA
REPORT NUMBER EXT-STUD-12-AND-SUPPL PUB DATE MAR 66
STATE UNIV. OF N.Y., ITHACA
EDRS PRICE MF-\$1.25 HC-\$11.04 276P.

DESCRIPTORS- \*YOUTH LEADERS, \*TASK PERFORMANCE, \*JOB ANALYSIS, \*JOB TENURE, \*PARTICIPANT CHARACTERISTICS, RURAL EXTENSION, STATISTICAL DATA, QUESTIONNAIRES, LEADERSHIP TRAINING, EXTENSION AGENTS, YOUTH CLUBS, EVALUATION, ROLE PERCEPTION, 4 H CLUBS, COOPERATIVE EXTENSION SERVICE, NEW YORK STATE,

TO DETERMINE THE FACTORS RELATED TO FIRST-YEAR 4-H LEADERS' CONTINUING IN OR DROPPING OUT OF 4-H WORK AND TO ANALYZE RELATIONSHIPS AMONG CHARACTERISTICS OF A SAMPLE OF FIRST-YEAR 4-H LEADERS AND THE EVALUATION BY THEIR 4-H AGENTS OF JOBS PERFORMED AND NOT PERFORMED, IN 1961 QUESTIONNAIRES AND FERSONALITY TESTS WERE GIVEN TO 527 FIRST-YEAR 4-H LEADERS IN NEW YORK WHO WERE FART OF A NORTHEASTERN REGIONAL SAMPLE. QUESTIONNAIRES WERE ALSO ADMINISTERED IN 1961 AND 1962 TO 4-H AGENTS IN THE COUNTIES FROM WHICH THE LEADERS CAME. MAJOR FERSONAL CHARACTERISTICS OF THE SAMPLE ARE OUTLINED AND THEN RELATED TO TENURE. IMPLICATIONS OF THE FINDINGS ARE RELEVANT IN TRAINING AGENTS TO TRAIN LEADERS. IN THE SUPPLEMENT, DISTRIBUTION OF JOBS ACCORDING TO THE NUMBER OF FIRST-YEAR 4-H LEADERS FERFORMING AND NOT PERFORMING THEM, AND THE PERCEPTIONS OF 4-H AGENTS AND STATE LEADERS OF 4-H LEADERS JOBS ARE PRESENTED IN TABLES. APPENDIXES INCLUDE QUESTIONNAIRES. DOCUMENT AVAILABLE FROM OFFICE OF EXTENSION STUDIES, NEW YORK STATE COLLEGES OF AGRICULTURE AND HOME ECONOMICS, CONTRACT COLLEGES OF THE STATE UNIVERSITY AT CORNELL UNIVERSITY, ITHACA, NEW YORK. #### PREFACE

The data for this study were obtained from a sample of New York first-year 4-H leaders who were part of a larger sample in a study of these leaders in the Northeastern Region of the United States and from 4-H agents in the counties from which the sample of New York first-year 4-H leaders came. The tenure and characteristics of the first-year leaders and the evaluation of their job performance by their 4-H agents are the broad areas covered by the study.

It is believed that the findings and their implications are especially relevant in training agents for their task of training leaders. Those responsible for planning and conducting the in-service training of 4-H agents should find both stimulation and guidance in the findings of the study.

The 4-H leaders and their agents who provided the information for the study were most cooperative, and their contributions are greatly appreciated. The clerical and stenographic staff of the Office of Extension Studies have done an excellent job of preparing the statistics and manuscript for the study. For their conscientious work the author is most grateful.

# STUDY OF FIRST-YEAR 4-H CLUB LEADERS IN NEW YORK STATE

Tenure, Characteristics of Leaders, and Evaluation Of Job Performance by 4-H Agents

#### Summary of Findings

#### I. Introduction

A. The data for this study were obtained principally from questionnaires and personality tests administered at the end of the 4-H Club year in 1961 to 527 first-year 4-H leaders in New York State who were part of a Northeastern Regional sample and from questionnaires administered to 4-H agents in the New York counties from which the 4-H leaders came who were part of the regional sample. Data were also obtained from 4-H agents in 1962 on continuity in club work into a second year for the leaders studied in 1961.

# II. Objectives of New York Study

- A. The <u>first objective</u> of the New York study was to ascertain what factors are related to first-year 4-H leaders' continuing in or dropping out of 4-H work.
- B. The <u>second objective</u> was to analyze the entire sample of first-year 4-H leaders with respect to 1) relationships among the various characteristics of these leaders and 2) the evaluation by their 4-H agents of jobs performed and not performed by the first-year 4-H leaders.

#### III. Selected Major Characteristics of the Sample of First-Year 4-H Leaders

- A. Age--Almost half of the leaders were in the 30 39 age group.
- B. Sex--Almost three fourths of the leaders were females.
- C. Place of residence--Almost two fifths of the leaders resided on farms, slightly over two fifths were rural nonfarm dwellers, and less than one fifth were urban.
- D. Educational level--Almost four fifths of the leaders were at least high school graduates, but a little over half of these had completed high school only. A little over one third of the total had gone beyond high school.

1

1595 374 13191

3 (4

- E. Types of leaders--Two fifths of the leaders were organizational leaders with project responsibilities; less than a third were assistant organizational leaders with projects; less than a third were project-only leaders; and the remaining few (17 leaders) were either organizational-only or assistant organizational-only leaders.
- F. Tenure of leaders--Slightly more than four fifths of the leaders continued their leadership into a second year.

#### IV. Analysis of Factors Relating to Tenure

- A. Relationship to Tenure of Personal Characteristics of First-Year 4-H Leaders
  - 1. The following personal characteristics of the firstyear 4-H leaders were tested by X<sup>2</sup> and by analysis
    of variance (F test) in the case of the last group
    of characteristics for relationship to whether or
    not leadership was continued into a second year:
    sex, age, educational level, place of residence,
    number of years the leader had been a 4-H member,
    whether or not leader's own children were in his
    club, percent of leader's own eligible (age) children
    ever 4-H members, and the personality factors of the
    leaders.
  - 2. When tested by X<sup>2</sup> and analysis of variance (F test) in the case of personality factors, no relationship was significant at the .05 level.
- B. Relationship to Tenure of First-Year 4-H Leaders Characteristics Attributable to Their Club
  - 1. The following first-year 4-H leaders' characteristics attributable to the clubs with which associated were tested by X<sup>2</sup> for their relationship to whether or not leadership was continued into a second year: type of leadership, size of club, age of club, seasonality of the club, number of other leaders in the club, number of months leader served club, number of months leader expected to serve club this year, number of local club and/or project meetings attended; and number of projects carried by first-year leaders responsible for projects.

Includes the following types: 1) organizational-only leaders, 2) organizational leaders with projects, 3) assistant organizational-only leaders, 4) assistant organizational leaders with projects and 5) project-only leaders.

2. When tested by X<sup>2</sup> only four of the nine characteristics were significantly related to tenure at the .05 level or less, but in no case was the association of a high degree as shown by the T coefficient. These were: 1) size of club, with drop-outs most frequently associated with small clubs, 2) number of other leaders associated with clubs, with drop-outs most frequently in clubs with no other leaders, 3) number of months served as leader, with drop-outs most frequent for short periods of service, and 4) number of months expected to serve this year, with drop-outs most frequent for short period of service expected.

# C. Relationship to Tenure of First-Year 4-H Leaders' Characteristics Associated with the Training They Received

- 1. The following first-year 4-H leaders' characteristics associated with the training which they received were tested by X<sup>2</sup> for their relationship to whether or not leadership was continued into a second year: whether or not received training at least at one county-wide training meeting, whether or not received training at least at one district training meeting, whether or not received training at least at one community training meeting, whether or not received training at least at one training meeting outside of county, whether or not received training at least at one training meeting of any kind.
  - 2. When tested by X<sup>2</sup> only two of the five relationships between receiving training and tenure were significant at the .05 level or less, but in neither instance was the degree of association high as shown by the T coefficient. These were: 1) received training at least at one county-wide meeting, with drop-outs being more frequent for those not receiving this kind of training and 2) received any kind of training at least at one training meeting, with drop-outs being more frequent for those not receiving any kind of training.

# D. Relationship to Tenure of Total Agreement of First-Year 4-H Leaders and Their 4-H Agents on Performance of Leaders Jobs

1. The percentages of agreement on doing or not doing jobs and should do or should not do them between first-year 4-H leaders and their 4-H agents for all 4-H leaders, organizational leaders with and without projects, assistant organizational leaders with and

- without projects, and project-only leaders were tested by  $X^2$  for their relationship to whether or not leadership was continued into a second year.
- 2. For neither all leaders nor any of the three types of leaders was the relationship significant at the .05 level when tested by  $X^2$ .

#### V. General Analysis of Characteristics of All First-Year 4-H Leaders

- A. Relationship of Personality Factors of Leaders to Age,
  Sex, and Residence of the Leaders and Personality Factors
  Of the Male and Female General Adult Population
  - 1. When the personality factors of the leaders were tested by analysis of variance (F test) for relationship with age, sex, and residence of the leaders, a significant relationship was found at the .05 level or less for:
    - a. Age--only two of the 16 personality factors
    - b. Sex--10 of the 16 personality factors
      - c. Residence--seven of the 16 personality factors
  - 2. When the personality factors of the male and female leaders were tested by analysis of variance (F test) for differences on mean raw scores with the males and females of the general adult population, the male leaders with significant differences on eight of the 16 personality factors were more similar to their sex group in the general adult population than the females with significant differences on 10 of the 16 personality factors. Thus compared to their respective sex in the general adult population, the leaders differ from the general population norms as follows:

# Males aloof submissive glum conscientious timid conventional simple insecure

#### **Females**

aloof
high general ability
submissive
enthusiastic
tough
trustful
conventional
simple
dependent
controlled

- B. Relationship of Selected Personal Characteristics of Leaders to Other Selected Characteristics of These Leaders
  - 1. Relationship of Selected Personal Characteristics
    Of Leaders to Types of Leaders
    - a. The following selected personal characteristics of first-year 4-H leaders were tested by X<sup>2</sup> and, in the case of the personality factors, by analysis of variance (F test) for their relationship to types of leaders: sex, number of own children in leader's club, percent of own eligible (age) children ever 4-H club members, number of months leader expects to serve and 16 personality factors.
    - b. When tested by X<sup>2</sup> and analysis of variance (F test) in the case of the personality factors only two of the five relationships were supported at the .05 level or less. These were sex to types of leaders and number of months the leader expects to serve to types of leaders. In both cases the degree of association as shown by T was low. Male leaders much more frequently than female leaders had accepted organizational leadership positions and somewhat less frequently assistant organizational and project-only leadership positions. As might be anticipated, those leaders who expected to serve a short time were most frequently project leaders.
  - 2. Relationship of Selected Personal Characteristics
    Of Leaders to Sex of Leaders
    - a. The following selected personal characteristics of first-year 4-H leaders were tested by X<sup>2</sup> for their relationship to the sex of the leaders: place of residence, age, percent of eligible (age) own children ever 4-H members.

Five major types of leaders were identified in the study. These five types and their respective numbers are: 1) organizational-only leaders--6; 2) organizational leaders also responsible for projects--212; 3) assistant organizational-only leaders--11; 4) assistant organizational leaders also responsible for projects--142; and 5) project-only leaders--156. For this section of the study, types (1) and (2) were combined and types (3) and (4).

- b. When tested by X<sup>2</sup> two of the three relationships were supported at the .00T Tevel. These were residence and percent of eligible (age) own children ever 4-H members. In both instances the degree of association as shown by T was low. The farm leaders had a somewhat higher percent of males than did either the rural nonfarm or urban leaders or than all leaders; the opposite was true for female leaders. The male leaders with eligible (age) children more frequently had a larger percent of their eligible (age) children who had at some time been 4-H members than did the female leaders.
- 3. Relationship of Selected Leader Characteristics
  Attributable to Association with 4-H Clubs to Sex
  Of Leaders
  - a. The presence of the first-year 4-H leader's children in the club and the seasonality of the first-year 4-H leader's club were tested by X<sup>2</sup> for relationship to the sex of leader.
  - b. When tested by X<sup>2</sup> only the relationship of seasonality of the club to the sex of the leader was supported at .05 level or less. There was a considerably larger percent of male leaders serving the summer or spring and summer (short-term) clubs and a considerably smaller percent of female leaders serving them than the percentages of males and females in the other major seasonality class or in the total group of leaders.
  - 4. Relationship of Types of Leaders to Other Selected Leader Characteristics Attributable to Association With 4-H Clubs
    - a. The types of first-year 4-H leaders in relationship to number of club and/or project meetings attended and to number of months served was tested by X<sup>2</sup>.
    - b. When tested by X<sup>2</sup> both relationships were supported at the .001 level, but in both instances the degree of association as shown by T was low. Projectonly leaders tend to attend few meetings compared to organizational leaders with and without projects or assistant organizational leaders with and without projects. The organizational leaders with and without projects are the ones who attend the greatest number of meetings.

- C. Relationship of Personality Factors of First-Year 4-H
  Leaders to Agreement with Their 4-H Agents Regarding
  Performance of Jobs
  - 1. The relationship of the high and low percentage agreement between first-year 4-H leaders and their 4-H agents in respect to the performance of jobs and mean sten scores on 16 personality factors of these leaders for all jobs and for seven types of jobs, i.e., teaching, morale building, individual and special assistance, club organization and supervision, representing 4-H and promotional, chores, and self-improvement was tested by analysis of variance (F test).
  - 2. There was only a small degree of relationship shown when tested by analysis of variance. Three types of jobs and the total showed a significant difference for the mean sten scores of lower and upper halves on percent of agreement for as many as three personality factors; two types showed a significant difference for two factors; one type had a significant difference for one factor; and one type had no factor with a significant difference. It is difficult to attach any importance to these few differences.

# VI. Evaluation by 4-H Agents of Jobs Performed and Not Performed By First-Year 4-H Leaders

- A. Relationship of the Number of First-Year 4-H Leaders
  Performing Jobs to Approval by Their 4-H Agents on
  Performance of Jobs
  - 1. For all leaders as well as the three major types of leaders, i.e., organizational leaders with projects, assistant organizational leaders with projects, and project-only leaders, approval by their agents of what the leaders did occurred more extensively where the numbers performing the jobs were high and less extensively where the numbers performing the jobs were low. When tested by X<sup>2</sup>, the relationship was significant for all leaders and the three types at .05 level or less, and the degrees of association as shown by T were average or in that direction.

Percent of agreement was obtained by adding jobs done and should as seen by 4-H agents and jobs not done and should not do as seen by 4-H agents and dividing by the total number (97) of jobs.

- B. Relationship of the Number of First-Year 4-H Leaders
  Not Performing Jobs to Disapproval by Their 4-H Agents
  On Nonperformance of Jobs
  - 1. For all leaders as well as the three major types of leaders disapproval by their agents of what the leaders failed to do occurred to a lesser extent where the number not performing them was large and to a greater extent where the number of leaders not performing them was small. When tested by X<sup>2</sup>, the relationship was significant for all leaders and the three types at the .05 level or less, and the degrees of association as shown by T tended toward average.
- C. Summary of Approval and Disapproval by 4-H Agents of Jobs Performed and Not Performed by Their First-Year 4-H Leaders in Relationship to Number of Leaders Performing or Not Performing the Jobs
  - 1. In general when jobs were done or not done by large numbers of leaders, those jobs were most numerous where there was the greatest agreement between leaders and agents concerning their performance.
- D. <u>Jobs with Relatively High Numbers of Leaders Performing</u>
  Them and Low Percentages of Leaders Should (According
  To Their 4-H Agents) and Did of All Jobs Done
  - 1. The jobs which 100 or more of all leaders did and from 0 to 29 percent should have done as seen by their 4-H agents were:
    - a. Local club organization and supervision
      - 1) Plan local 4-H events such as 4-H parties and achievement nights
      - 2) Enter exhibits at county fair
    - b. Chores
      - 1) Transport 4-H members to and/or from local 4-H Club meetings
      - 2) Transport 4-H members to and/or from local 4-H Club events

Although in the interest of brevity only the findings for all leaders for this relationship are given here, it should be emphasized that the findings for the three major types of leaders which appear in the main body of the study (pp. 88 to 94) are really more important for 4-H agents and state leaders who are concerned with leadership matters.

- 3) Furnish food for local 4-H Club meetings
- 4) Furnish food for local 4-H Club events
- 5) Prepare food or help prepare food for local 4-H Club events
- 6) Transport projects to local 4-H Club events
- 7) Transport projects to county 4-H Club events
  - 8) Transport projects to county fairs
- 9) Clean up place after community 4-H events
- 10) Clean up and/or arrange exhibit or judging area for members' project work at county fair or county achievement day
- 11) Provide food or other materials for county 4-H events or activities

#### c. Individual and Special Assistance

- 1) Do special work on a member's project that has possibility of winning an award
- 2) Actually do some of the project work in order to get it finished
- records in order to get them finished

#### d. Morale Building

- 1) Lead recreation in local 4-H meetings
- 2. The jobs listed above are the ones which 4-H agents and leaders should consider for better understanding as to whether they should be done. As might be expected, many of these jobs are also to be found in similar lists for the three types of leaders, i.e., organizational leaders with projects, assistant organizational leaders with projects, and project-only leaders.
- E. Jobs with Relatively High Numbers of Leaders Not
  Performing Them and High Percentages of Leaders Should
  Have (According to Their 4-H Agents) and Did Not Perform
  Them of All Jobs Not Performed 1
  - 1. The jobs which 100 or more of all leaders did not perform and from 80 to 100 percent should have performed as seen by their 4-H agents were:

#### a. Teaching

1) Give demonstrations at local 4-H Club meetings

leaders for this relationship are given here, it should be emphasized that the findings for the three major types of leaders which appear in the main body of the study (pp. 94 to 102) are really more important for 4-H agents and state leaders who are concerned with leadership matters.

- 2) Train members to demonstrate
- 3) Train members to judge
- 4) Show or teach 4-H members how to fill out their project records in local 4-H Club meetings
- 5) Show or teach 4-H members how to fill out their project records individually
- 6) Show or teach 4-H members how to fill out their project records as a group
- 7) Discuss individually with 4-H members for whom leader is responsible which 4-H project they should carry
- 8) Discuss as a group with 4-H members for whom leader is responsible which 4-H project they should carry
- 9) Discuss individually with members their achievement at end of project year
- 10) Discuss as a group with 4-H members their achievement at end of the project year

#### b. Local Club Organization and Supervision

- 1) Persuade 4-H members to get their record books in on time
- 2) Attend local 4-H Club events
- 3) Chaperone local 4-H Club events
- 4) Serve on county-wide (or district-wide) 4-H committees of adults
- 5) Fill out forms the county extension office asks for
- 6) Have the club meet in leader's own home
- 7) Attend local 4-H Club meetings held outside of leader's own home

#### c. Representing 4-H and Promotional

1) Explain to parents what 4-H work is and what Is expected of them

#### d. Individual and Special Assistance

1) Counsel older 4-H members on personal problems

### e. <u>Self Improvement</u><sup>1</sup>

1) Practice the giving of demonstrations before giving them at local 4-H Club meetings

It is possible that some of the self-improvement jobs which leaders failed to perform were not done because there was no opportunity for doing them, as for example, attending district leader training. Even though such opportunities were not available, the 4-H agents may have thought they should be.

- 2) Attend 4-H leader training meetings in the community
- 3) Attend 4-H district leader training
- 4) Attend county-wide 4-H leader training meetings
- 5) Attend 4-H leader association meetings
- 6) Go to county extension office for materials or help
- 7) Make telephone calls to county extension office for materials or help
- 8) Receive county extension worker in own home to discuss 4-H work
- 2. The jobs in the above list are the ones which 4-H agents and leaders should consider for a better understanding as to whether or not they should be done. As might be expected, a goodly number of these jobs are also to found in similar lists for the three types of leaders, i.e., organizational leaders with projects, assistant organizational leaders with projects and project-only leaders.

## More Significant Findings With Interpretations

I. Slightly more than four fifths of the 527 first-year leaders continued their leadership into a second year.

Interpretation: This is an unusually high continuity of leadership. It is possible that to some extent the study itself may have influenced this result. However, the finding should give the 4-H agents a greater confidence in the ability of the 4-H program to hold its first-year leaders.

- II. The analysis of factors relating to tenure, i.e., whether or not leaders continuing their leadership into a second year resulted in the discovery of only a limited number of statistically significant factors. The few significant factors were:
  - A. Size of club, with drop-outs most frequently connected with small clubs.
  - B. Number of other leaders associated with clubs, dropouts most frequently in clubs with no other leaders.
  - C. Number of months served as a leader, with drop-outs most frequent for short period of service.
  - D. Number of months expected to serve as leader this year, with drop-outs most frequent for short period of service expected.
  - E. Received training at least at one county-wide meeting, with drop-outs being more frequent for those not receiving this kind of training.
  - F. Received any kind of training at least at one training meeting, with drop-outs being more frequent for those not receiving any kind of training.

Interpretation: These six significant relationships indicate approaches for dealing with the tenure problem of leaders. Size of club and number of leaders associated with clubs are practical matters to which attention can be given. The number of months leaders served and the number they expected to serve provide clues for attacking the problem of their continuity in 4-H work, although in the case of project leaders who are specialists in given fields, it may be unrealistic to anticipate their continuity. Certainly, receiving training should be a major concern of 4-H agents. The small number of factors significantly related to tenure

which were discovered through the study indicates the need for further exploration. Incidental factors in the lives of leaders which the study failed to consider should be examined for their effects on tenure.

- III. The general analysis of characteristics of all first-year 4-H leaders indicated the following significant relationships:
  - A. Ten of 16 personality factors showed significant differences between males and females.
  - 3. Seven of 16 personality factors showed significant differences for places of residence.
  - C. When the 16 personality factors for male and female first-year 4-H leaders are related to these factors for males and females respectively in the general adult population, there are significant differences for males on eight factors and for females on ten factors, showing that in personality there is a considerable difference between 4-H leaders and the general population.
  - D. Types of leaders and sex are significantly related with males more often than females accepting organizational (with or without projects) leadership and less often assistant organizational (with or without projects) and project-only positions.
  - E. Types of leaders and number of months leader expected to serve are significantly related with leaders who expected to serve a short time more often being project-only leaders.
  - F. Sex of leaders and residence are significantly related with farm leaders having a somewhat higher percent of males than did either the rural nonfarm or urban leaders, or than all leaders, the opposite being true for female leaders.
  - G. Sex of leaders and percent of eligible (age) own children ever 4-H members are significantly related, with male leaders who have eligible (age) children more often having a larger percent of their own eligible (age) children ever 4-H members than female leaders.

ERIC

H. Sex of leaders and seasonality of the club are significantly related, with males having a considerably higher percent serving summer or spring and summer clubs and females a considerably smaller percent serving them than was true for the other major seasonality class.

Interpretation: 4-H agents should be in a position to work more understandingly with their new leaders if they recognize that as males and females they differ on a number of personality factors from these two classes of the general adult population. Agents need to acquaint themselves with the factors on which they differ as a basis for being more alert about such factors as they work with first-year leaders. Likewise they can more effectively deal with their male and female first-year leaders if they are aware of important personality differences between the sexes. The same applies to the place of residence of the leaders. However, a word of warning is appropriate, i.e., that the use of the findings relative to personality differences of the first-year leaders should avoid the pitfall of stereotyping.

The fact that willingness to accept a particular type of leadership with a club is likely to be related to the number of months the leader thinks he is expected to serve or by the sex of the leader are clues for agents to follow. Indeed, the fact that place of residence, percent of eligible (age) own children ever 4-H members and seasonality of the club are related to, or may actually determine, whether a man or woman becomes a leader are clues by which agents can be guided in recruiting leaders.

- IV. The evaluation by their 4-H agents of jobs performed and not performed by first-year 4-H leaders indicated the following significant relationships:
  - A. In general when jobs were done or not done by large numbers of leaders, those jobs were most numerous where there was greatest agreement between leaders and agents concerning their performance.
  - B. Lists of jobs with relatively large numbers of leaders performing them and low percentages who did and should have according to their 4-H agents as well as lists of jobs with relatively large numbers not performing them and high percentages who did not do them and should have according to their 4-H agents were developed in the study.

Interpretation: The problem of agreement between agents and leaders with respect to the performance of jobs is not too overwhelming in view of the fact that when jobs were done or not done by large numbers of leaders, those jobs were most numerous when there was greatest agreement between leaders and agents concerning their performance. In this connection the study provides classified lists of jobs for which large numbers of all leaders as well as five types either did or did not do them and which also fall respectively into the not extensively approved and extensively disapproved categories. These lists are the concrete material which 4-H agents and their leaders should consider in arriving at an understanding of the leader's total job. I

The lists can be found in this report or the supplement thereto.

#### STUDY OF FIRST-YEAR 4-H CLUB LEADERS IN NEW YORK STATE

Tenure, Characteristics of Leaders, and Evaluation Of Job Performance by 4-H Agents

#### Introduction

#### Initiation of Study

The possibilities for a study of the tenure of 4-H leaders in the Northeastern States was first discussed by the 4-H Club leaders from these states at the National 4-H Conference in June, 1958. Following this meeting, a preliminary proposal was presented by mail to the Northeastern 4-H Club state leaders for their further consideration. This proposal indicated that the study which was suggested grew out of a desire "to know why some of the leaders drop out of 4-H leadership, and why the others remain in, some for many years."

The preliminary proposal was next presented to Northeastern States Extension Directors at their fall meeting in 1958. The directors approved the preliminary proposal and the appointment of a steering committee for the stucy. Director H. O. Stuart of Rhode Island, Chairman of the Northeastern States Extension Directors, appointed the following committee:

Frank D. Alexander, Study Specialist, Cornell University
Charlotte Conaway, Assistant State 4-H Club Leader,
Maryland

Mylo Downey, Director of the Division of 4-H and Youth Development of the Federal Extension Service, was asked by Director Stuart to serve as a consultant to the Committee. Later Maurice Hill, Program Leader of the Division of 4-H and Youth Development of the Federal Extension Service, replaced Mr. Downey. Laurel Sabrosky, Extension Analyst with the Division of Extension Research and Training, FES, was asked by Director Stuart to serve as director of the study.

Kenneth Coombs, State 4-H Club Leader, Rhode Island
R. P. Davison, Director, Vermont Cooperative Extension
Service

Noreen Ray, Assistant State 4-H Club Leader, Connecticut Marvin Boss, Assistant State 4-H Club Leader, Chairman, Massachusetts

The first meeting of the steering committee was held in New York City, May 21-22, 1959. At this meeting the following major decisions and announcements were made:

- 1. Purpose of the study: To determine the factors associated with dropouts and retention of first-year 4-H leaders.
- 2. Exploratory phases:
  - a. Obtain a complete record of the number of all local 4-H Club leaders (for the 1959-60 club year) by years of service and sex from each state (if possible) in the Northeastern Region.
  - b. Collect from 4-H staff members in each state opinions as to the factors affecting leadership tenure which should be studied.
  - c. Conduct a limited number of exploratory interviews with present and former 4-H Club leaders in order to discover any unknown or unsuspected factors associated with the dropout of leaders.
- 3. Laurel Sabrosky, Extension Analyst, Division of Extension Research and Training, FES, has been requested by Director Stuart to serve as director of the study. Mylo Downey, Regional 4-H Club Representative, FES, has been requested by Director Stuart to serve as administrative liaison person.
- 4. The steering committee defined its role as that of advising and assisting in facilitating the conduct of the study in the various states.
- 5. The individual states will be responsible for collecting whatever data or information are required for the study.
- 6. Twelve states in the Northeastern Region will be invited to participate. Each state will be invited to participate in each particular step in the study. A state may choose to participate in each successive step without being committed to participate in the next step.

<sup>&</sup>lt;sup>1</sup>Replaced on the committee by Sam Gwinn, Director of Delaware Cooperative Extension Service.

7. The Director of Extension in each participating state will be asked to designate a contact person in his state whom the study director, the administrative liaison person, or the committee can contact to keep the state informed of developments relating to the study.

## Preliminary Steps of Study

The first preliminary step of the study was a survey in the spring of 1960 by means of a mailed questionnaire, to ascertain the extent to which records of 4-H Club leaders were available in the files of the county extension offices (see Appendix A). The survey sought to find out if specific information, such as the names, sex, and tenure of local 4-H Club leaders could be obtained easily from the files for the purpose of carrying out the second preliminary step described in the next paragraph. The questionnaires for this first preliminary step were handled directly from Washington by the director of the study.

The second preliminary step of the study, namely, obtaining a complete record of the number of all local 4-H Club leaders for the 1959-60 club year by years of service and sex from each state in the Northeastern Region was carried out. This phase of the study was designed to provide a basis for sampling for the major operation of the study (see Appendix B for data collecting form).

The third preliminary phase of the study, namely, evaluation by state leader staffs (assisted in some instances by selected county agents) of tenure-related factors to be studied was carried out in January, 1959. This operation involved the reviewing by the state staffs of a list of possible leader-ship tenure factors which the staffs rated as to importance for inclusion in the questionnaire to be used in the major phase of the study. The data thus obtained provided guidance in selecting items for the questionnaire which was to be used in the principal phase of the study.

The fourth preliminary step, namely, conducting a limited number of exploratory interviews with present and former 4-H Club leaders to discover unknown or unsuspected factors associated with the dropout of leaders, was carried out in Maryland, Pennsylvania, Massachusetts and Vermont during the winter of 1959-60. These interviews provided suggestions for items to be included in the questionnaire that was to be used in the major phase of the study.

#### Plan for Conducting Final and Major Phase of Study

The director of the study distributed a plan for conducting the final and major phase of the study in February, 1961. Of the 12 Northeastern States, 11 agreed to participate in this final stage of the study. In summary, the plan was as follows:

- A. General purpose: To ascertain what factors are related to first-year leaders' continuing in or dropping out of 4-H work.
- B. Tentative hypotheses to be tested:
  - 1. Kind of local club organization (project vs. community, short time vs. year-round, agent taking responsibility for teaching vs. leader having this responsibility, and residence classification of members) is related to the tenure of local 4-H leaders.
  - 2. Projects carried by members are related to the tenure of local 4-H leaders.
  - 3. Local leaders' concept of accomplishment in 4-H is related to his tenure.
  - 4. What the local 4-H leader has done during the year is related to his tenure.
  - 5. What the local 4-H leader enjoys doing is related to his tenure.
  - 6. Consistency between what the local 4-H Club leader does and what he thinks a local leader ought to do is related to his tenure.
  - 7. Personality of the local 4-H leader is related to his tenure.
  - 8. Personality of the local 4-H leader is related to what he does as a leader.

- 9. Personality of the local 4-H leader is related to his concept of accomplishment in 4-H Club work.
- 10. The kind of training and information he receives is related to his tenure.

#### C. Data to be collected:

- 1. A questionnaire in pre-test form has been constructed and accompanies this statement of plan. When tested, the questionnaire will be reproduced by FES (see Appendix C for final questionnaire with the supplement used in New York State and the final definition of first-year leader used in all states).
- 2. A personality test also accompanies the plan, and each state will be expected to purchase the necessary copies. 1
- 3. A year after the questionnaire and personality test are used, county extension workers will provide information relating to those leaders who stay in 4-H Club work, and those who drop out, with reasons for dropping out.

#### D. Sample:

- 1. One third of the counties in the Northeastern Region will comprise the sample for the study. These have been selected at random from alphabetical lists of the counties in each state. All first-year leaders in these counties will be included in the study. The number of leaders to be studied will be approximately 2,500.
- 2. Definitions of leaders: A 4-H Club local leader, is a leader or co-leader or assistant leader or project leader of a local (or in some cases, a county-wide) 4-H Club. He or she must not also be a 4-H member--that is, carry any 4-H project, not even junior leadership. Temporary project teachers<sup>2</sup> are not included, nor are sponsoring

The personality test which was used was the <u>Sixteen Personality</u>
<u>Factor Questionnaire</u>, <u>Form C</u>, designed and constructed by R. B.
Cattell, D. R. Saunders, and G. Stice, Institute for Personality and Ability Testing, 1602 Coronado Drive, Champaign, Illinois.

Temporary project teachers (or leaders) are those who work with club members, teaching them how to do the project work, but who are not responsible for project enrollment, project records, project completions, or any other phase of the club member's club work.

committee members or persons who act as representatives of the county extension worker, or serve on advisory committees or councils but who are not actually responsible for a club, or some part of it.

- 3. Definition of tenure: The length of the "project year" for a 4-H Club is considered a "year" of tenure, although a person cannot be considered to have served more than one "year" of leadership within a 12-month period. Years as a "junior leader" cannot be counted. Years of 4-H leadership in another county or state should be counted if known.
- E. When the data will be collected:

The data will be collected from first-year leaders as near the end of their 4-H Club project year in 1961 as possible. Those leaders who may have quit during the project year are to be included. In the summer and fall of 1962, the information from county extension workers concerning leaders who have dropped out and reasons therefore will be obtained.

F. How the data will be collected:

Although the data could be collected through personal interviews, it is suggested that the data be collected in specially called meetings of the first-year leaders. Those leaders who do not, or cannot attend these meetings will be contacted personally. It is recommended that two persons be assigned to the data collection. A state 4-H Club staff member, a county extension worker in another county, or other competent persons can collect the data, but this job should not be undertaken by an extension worker in his own county.

- G. Responsibilities of the Federal Extension Service and the State Extension Services:
  - 1. The Federal Extension Service will:

Develop and duplicate the questionnaire, and provide enough copies for each state to use for the regional study.

Provide states with information about how to order personality test materials.

Explain the administration of the study, and train, to the extent necessary, the contact person in each state.

Draw the sample of counties for the study, and send lists of names of counties drawn to the respective states.

Tabulate the data, score the tests, analyze the data, write the report, and as far as we know now, duplicate the report.

#### 2. The State Extension Services will:

Review the study plan and tentative questionnaire, and report extent of participation to the Federal Extension Service.

Through the Regional 4-H Club Study Committee, pretest the questionnaire.

Through the Regional 4-H Club Study Committee, try out the personality test on one local leader, per committee member.

Be responsible for administering the study in the state:

Have county extension workers in participating counties prepare a list of first-year leaders in the 4-H project year of 1960-61 ready before the first interviewing starts.

Decide who will collect the data.

Pay the expenses of persons collecting the data. For those not on the extension staff, this will cost, roughtly, \$1.25 an hour, plus mileage and other expenses; or \$10 a day, plus mileage. The Census Bureau pays about \$1.60 an hour plus travel, but their average included areas with much higher labor costs than in many of the rural areas included in this study.

Buy the personality test materials.

See that the data are collected.

Send completed questionnaires and tests to the Federal Extension Service.

Inform county extension workers in participating counties of the need for keeping informed about dropped-out leaders who were in only during 1960-61, so that they can report on "can't help" reasons in the summer and fall of 1962.

Assist with and participate in regional conferences on use of data.

H. Summary of (preliminary) sample numbers by states.

(The plan actually carried the number of first-year leaders in each county.)

<u>State</u>	Estimated no. of first-year local leaders
Connecticut	173
Delaware	28
Maine	49
Maryland	80
Massachusetts	· 164
New Hampshire	126
New Jersey	195
New York	557
Pennsylvania	398
Rhode Island	19
Vermont	128
West Virginia	<u>869</u>
Total	2786

Maine did not participate in the final stage of the study, i.e., the administration of questionnaires and personality tests to the first-year 4-H leaders. According to A Report of a Study To Determine Factors Associated with the Tenure of First-Year Local 4-H Club Leaders, 1961-62 in 11 Northeastern States by Laurel K. Sabrosky, Division of Extension Research and Training, FES, July, 1964:

'The (final) sample--all of the first-year leaders in one-fourth of the counties having Extension work in the 11 States -- was drawn in the Federal Extension office, and sent to the States to be followed exactly. This sample should have provided about 2,000 first-year local 4-H Club leaders. However, difficulty in contacting leaders, especially those who had withdrawn from 4-H Club leadership early in the year, caused this number to be reduced. It is quite obvious that some of the leaders who stayed in 4-H Club leadership were also missed. Although it was hoped that most of the leaders could be contacted in meetings, it was found that in some States the leaders would not or could not attend meetings. This made personal interviewing necessary. Although a few leaders refused to fill out the personality test, most of them did so, and many enjoyed it. Complete, useable personality tests were obtained from about 1,590 first-year local 4-H Club leaders. About 20 additional tests were incomplete, but useable for some of the factors."

With some variation from state to state, the general plan as outlined by the director was carried out.

#### The New York State Study

#### Introduction

Since 19 counties in New York State, or 35 percent of the 54 counties in the state which had 4-H Club programs, were in the original sample of counties, and since these counties had, according to the study director's plan, approximately 557 first-year leaders, a state study was a possibility.

In planning for this study, it was decided to add a facet which would give more meaning to the findings from the leaders' questionnaires. The leader's questionnaire was primarily concerned with ascertaining what jobs the leader did, whether or not he enjoyed the jobs he did, and finally whether or not he felt he should do these jobs. Using the same list of jobs to which the leaders were asked to react, a questionnaire was prepared which sought to obtain from one 4-H agent in each of the 19 counties, their perception of these jobs as they applied to five types of leaders, i.e., leaders responsible for organization only, organizational leaders who are also responsible for projects, assistant leaders responsible for organization only, assistant organizational leaders who are also responsible for projects, and leaders responsible for projects only. This questionnaire was administered to the head 4-H agent in 18 of the 19 counties and to an assistant agent in the nineteenth county because the head agent had been in that county for a very short time and the assistant was present during the year in which the study of first-year leaders was conducted. All 18 of the head agents were in their respective counties during the year in which the first-year leaders types of leaders should or should not do the jobs listed were

then related to whether or not the leaders in the respective counties did these jobs (see Appendix D for questionnaire).

Beside the added facet relating to 4-H agents, in New York State a supplementary section which asked for additional personal data on the leaders was attached to the regional questionnaire.

The administration of the leader's questionnaire and personality test in New York State was initiated in each of the 19 counties in group meetings of first-year leaders. Since it was anticipated that some leaders could not attend these meetings, interviewers were employed in advance of the county meetings to contact and administer individually the two instruments to those leaders who failed to attend. These interviewers were asked to attend the group meetings. Thus, they were well trained for interviewing the leaders who had to be contacted individually. Actually, the numbers attending the group meetings which were held in August and September were small, so that in most of the counties a fairly large number of leaders had to be contacted individually.

The original estimate of leaders to be included in the regional study was 557. When the lists of first-year leaders were obtained from the 19 counties, there were 616 names. Nine of these were later found not to be first-year leaders. The final number who qualified as first-year leaders is given in Table 1 by counties. In addition, the number from whom both a questionnaire and personality test were obtained, the number who were reported as stay-ins for a second year of leadership and the number who dropped out or discontinued because of death, moving out of the county, or ill health are presented.

#### Objectives of New York Study

The first objective of the New York study was to ascertain what factors are related to first-year 4-H leaders' continuing

in (stay-ins) or dropping out (drop-outs) of 4-H work. Following a presentation of the major characteristics of the first-year 4-H leaders, the study focuses on the first objective. The data for this part of the study were obtained from questionnaires administered to first-year 4-H leaders in the late summer and fall of 1961, from personality tests taken by the leaders at the same time, from a list of the same leaders checked by 4-H agents in 1962 on continuity in club work into a second year, and from questionnaires administered to 4-H agents in the fall of 1962.

The analysis of the data relating to the first objective of the study is presented under four headings: 1) relationship to tenure of personal characteristics of the first-year 4-H leaders, 2) relationship to tenure of first-year 4-H leaders' characteristics attributable to their club association, 3) relationship to tenure of first-year 4-H leaders' characteristics associated with the training they received, and 4) relationship to tenure of total agreement of first-year 4-H leaders and their 4-H agents on performance of leaders' jobs. 1

Since a considerable amount of the data was obtained on the first-year 4-H leaders, a second objective of the study was to analyze the entire sample of first-year 4-H leaders with respect to 1) relationship of personality factors of leaders to age, sex, and residence of the leaders, and personality factors of the male and female general adult population; 2) relationship of selected personal characteristics of leaders to other selected characteristics of these leaders; 3) relationship of personality factors of first-year 4-H leaders to agreement with their 4-H agents in respect to the performance of jobs, and 4) evaluation

erene:

The 4-H leader's questionnaire asked for reactions of leaders to jobs in terms of 1) did or did not do, 2) if done, extent of enjoyment, and 3) whether or not leader should do. Only the leaders' answers to did or did not do jobs are used in this study.

by their 4-H agents of jobs performed and not performed by first-year 4-H leaders. The data used for this part of the study were obtained from the same sources as those used in the first part of the study.

#### Major Characteristics of the Sample of First-Year 4-H Leaders

The major characteristics of the sample of 527 first-year 4-H leaders are presented in Table 2. The important aspects of these characteristics are given in the following summary:

Age--Almost half of the leaders were in the 30-39 age group.

Sex--Almost three fourths of the leaders were females.

<u>Place of residence</u>--Almost two fifths of the leaders resided on farms; slightly over two fifths were rural nonfarm dwellers, and less than one fifth were urban.

Educational level--Almost four fifths of the leaders were at least high school graduates, but a little over half or these had completed high school only. A little over one third of the total had gone beyond high school.

Types of leaders—Two fifths of the leaders were organizational leaders with project responsibilities; less than a third were assistant organizational leaders with projects; less than a third were project—only leaders; the remaining few (17 leaders) were either organizational—only or assistant organizational—only leaders.

Tenure of leaders--Slightly more than four fifths of the first-year leaders continued their leadership into a second year.

Number of years leader was a 4-H Club member--Almost two thirds of the leaders had never been 4-H Club members. On the other hand, one fifth had been members for four or more years.

Any of own children in leader's club--Slightly over four fifths of the leaders had their own children in their clubs.

Eligible (age) own children ever 4-H Club members--Almost two thirds of all leaders reporting including those with no eligible children, had at some time had all of their eligible (based on age) children in 4-H Clubs. If only the 412 leaders with eligible children are considered, three fourths of them had at some time had all of their eligible children in 4-H Clubs.

Number of months served first year--Almost two thirds of the leaders served from nine to 12 months.

Number of months expected to serve--Three fourths of the leaders expected to serve from nine to 12 months when they accepted their leadership roles.

Number of club and/or project meetings attended -- A little over one half of the leaders had attended 10 or more club and/or project meetings.

Number of other leaders in club--Slightly over nine tenths of the leaders were associated with clubs which had at least one other leader.

Number of members in leader's club--Almost two fifths of the leaders had clubs with memberships from 11 to 20, and slightly over one third had clubs with ten or less members. Only one fourth were leaders of clubs with 21 or more members.

Age of leaders' clubs in years--Almost half of the leaders served clubs which were one year or less in age. Only one fourth of the leaders were connected with clubs which had existed for six or more years.

The questionnaire left it to each leader to indicate the number of his or her children too young to be 4-H members. The remainder of his or her children was the number who were considered eligible for 4-H membership.

Seasonality of leaders' club activity--Nine tenths of the leaders were associated with clubs which operated for approximately 11 months.

### Analysis of Factors Relating to Tenure

## Relationship to Tenure of Personal Characteristics of First-Year 4-H Leaders

Of the 527 first-year leaders from whom questionnaires and personality tests were obtained, 434, or 83 percent continued into a second year of leadership, 81, or 15 percent dropped out of 4-H work, and 12, or 2 percent were omitted from the tenure analysis because of death, moving from county, or ill health. Eight hypotheses relating personal characteristics to continuity of leadership from the first to second year were tested. These hypotheses were:

- 1. The sex of the first-year 4-H leader is related to whether or not leadership is continued into a second year.
- 2. The age of the first-year 4-H leader is related to whether or not leadership is continued into a second year.

Throughout this analysis of factors relating to tenure there is an underlying assumption that the factors considered may have had an influence (cause) on first-year 4-H leaders continuing or not continuing into a second year of leadership.

This part of the study which deals with tenure includes the 434 leaders who continued their leadership into a second year plus the 81 who dropped out at end of the first year.

- 3. The educational level (number of years attended school) of the first-year 4-H leader is related to whether or not leadership is continued into a second year.
- 4. The place of residence of the first-year 4-H leader is related to whether or not leadership is continued into a second year.
- 5. The number of years the first-year 4-H leader had been a 4-H member is related to whether or not leadership is continued into a second year.
- 6. The presence of the first-year leader's own children in his or her 4-H Club is related to whether or not leadership is continued into a second year.
- 7. The percent of the first-year 4-H leaders' own eligible (age) children who have been 4-H members is related to whether or not leadership is continued into a second year.
- 8. The personality factors (16 factors as measured by IPAT 16 P.F. Form C) of the first-year 4-H leaders is related to whether or not leadership is continued into a second year.

None of the first seven hypotheses were supported when the relationships were tested by  $X^2$  (Table 3), and the eighth one was not supported when tested by analysis of variance (F test).

Throughout the study, the significance level is taken at .05 or less using the two-tail test.

bSee Appendix F for detailed description of personality factors.

CWith one exception, the raw scores of first-year 4-H leaders on the Sixteen Personality Factor Questionnaire (or test), Form C, have been converted to stens for the general population of men and women combined. The exception occurs in Table 10, page 64, where raw scores of the male and female leaders have been converted to stens for males and for females of the general population. Sten scores are distributed over 10 equal-interval standard score points, from 1 through 10, with the population average (or mean) fixed at 5.5. To convert raw scores to standard norm sten scores it is necessary to have norm tables. norm tables for the Sixteen Personality Factor Questionnaire (or test), Form C, are available in the Handbook Supplement for Form C of the Sixteen Personality Factor Questionnaire, 'The 16 P.F. Test," published by the Institute for Personality Testing, 1602-04 Coronado Drive, Champaign, Illinois, Second Edition, 1962. The ster scores for item 8 in the above table were derived from Table 2, p. 11 of this publication.

### Relationship to Tenure of First-Year 4-H Leaders' Characteristics Attributable to Their Club Association

The relationship to tenure of nine first-year 4-H leaders' characteristics which could be attributed to them from their club connections were examined in terms of the following hypotheses:

- 1. The type of leadership of the first-year 4-H leader is related to whether or not leadership is continued into a second year.
- 2. The size of the club with which the first-year 4-H leader is associated is related to whether or not leadership is continued into a second year.
- 3. The age of the club with which the first-year 4-H leader is associated is related to whether or not leadership is continued into a second year.
- 4. The seasonality of the club with which the first-year leader is associated is related to whether or not leadership is continued into a second year.
- 5. The number of other leaders in the club with which the first-year 4-H leader is associated is related to whether or not leadership is continued into a second year.
- 6. The number of months which the first-year leader served the club with which associated is related to whether or not leadership is continued into a second year.
- 7. The number of months which the first-year 4-H leader expected to serve the club with which associated is related to whether or not leadership is continued into a second year.

Includes the following types: (1) organizational-only leaders, (2) organizational leaders with projects, (3) assistant organizational-only leaders, (4) assistant organizational leaders with projects, and (5) project-only leaders.

- 8. The number of local club and/or project meetings attended by the first-year leader is related to whether or not leadership is continued into a second year.
- 9. The number of projects carried by first-year leaders who have project responsibilities is related to whether or not leadership is continued into a second year.

When the relationships stated in the foregoing hypotheses were tested by  $X^2$ , only four of the nine were significant at the .05 level or less (Table 4). For none of the four hypotheses, however, was the degree of association as shown by T high. The four hypotheses which were supported dealt with size of club, number of other leaders, number of months served as leader and number of months expected to serve as leader. The first-year leaders associated with clubs having the smallest memberships (10 or less) were the ones having the largest percent discontinuing leadership. The smallest percent discontinuing leadership were the leaders associated with clubs having the largest memberships (21+). The first-year leaders associated with clubs having no other leaders were the group having the largest percent discontinuing leadership into the second year. The smallest percent discontinuing leadership was in the group of leaders associated with clubs having the largest number of other leaders (6-10). The first-year leaders who served a short period of time (0-4 months) were the group having the largest percent of drop-outs. The smallest percent discontinuing leadership was in the group who served the longest period of time (9-12 months). The first-year leaders who expected to serve the club a short period (0-4 months) were the group having the largest percent discontinuing leadership after the first year. The smallest percent discontinuing leadership was in the group of leaders expecting to serve the longest period of time" (9-12 months).

The project-only leaders are the type of leaders who contribute most to the group of leaders serving a short period of time.

The project-only leaders are the type of leaders who contribute most to the group of leaders expecting to serve a short period of time.

# Relationship to Tenure of First-Year 4-H Leaders' Characteristics Associated with the Training They Received

Four indices of the training of the first-year 4-H leaders were examined in terms of the following hypotheses:

1. The first-year 4-H leader's receiving training at least at one county-wide leader training meeting is

Since the leader's questionnaire provided no opportunity for the respondent to indicate that he did not have an opportunity to attend the various kinds of training listed in the questionnaire, the words received or receiving have been used in place of attended or attending at this point in the text and also in Table 5. It was thought that received emphasized less the volition of the leader with respect to training. Not receiving training includes both failure to attend or no opportunity to do so. In subsequent lists of jobs the word attend has been used as it appeared in the leader's questionnaire.

- related to whether or not leadership is continued into a second year.
- 2. The first-year 4-H leader's receiving training at least at one district (part of county) leader training meeting is related to whether or not leadership is continued into a second year.
- 3. The first-year 4-H leader's receiving training at least at one community leader training meeting is related to whether or not leadership is continued into a second year.
- 4. The first-year 4-H leader's receiving training at least at one leader training meeting outside of county is related to whether or not leadership is continued into a second year.
- 5. The first-year 4-H leader's receiving training at least at one leader training meeting of any kind is related to whether or not leadership is continued into a second year.

When the relationships stated in the foregoing hypotheses were tested by X<sup>2</sup>, only two of the five were significant at the .05 level or less (Table 5). For neither of these two hypotheses, however, was the degree of association as shown by T high. One of the two hypotheses supported by the test is Number 1. The first-year 4-H leaders who had not received any training at county-wide leader training meetings had a larger percent of drop-outs compared to the group who had received training at least at one county-wide leader training meeting. Although the extent to which first-year leaders in the sample had an opportunity to attend a county-wide training meeting is unknown, such training meetings are thought to be the most prevalent type in New York State.

Number 5 is the other hypotheses which is supported by the  $\chi^2$  test. In this case, all four types of training were combined to ascertain the number of stay-ins and drop-outs who had

ERIC

received training at least at one training meeting of any kind. The first-year 4-H leaders who had not received training of any kind had a much larger percent who dropped out than those receiving some training.

#### Relationship to Tenure of Total Agreement of First-Year 4-H Leaders and Their 4-H Agents on Performance of Leaders Jobs

For all leaders and for each of five types of 4-H leaders the 4-H agents in their respective counties indicated for the 97 jobs in the leader's questionnaire whether or not each type of leader should or should not do each job. These positive and negative designations of jobs were then related to the leader's indication in his questionnaire as to whether he did or did not do the job. The number of jobs that the leader did and the agent said he should do plus the number that he did not do and the agent said he should not do were taken as a percent of all 97 jobs. The percentages thus obtained provide indices of the degree to which leaders and their 4-H agents agree on the jobs which the latter performed or did not perform and which the agents thought they should or should not perform.

The hypotheses which were tested were:

- 1. The percent of agreement between all first-year 4-H leaders and their respective 4-H agents on the performance of leaders' jobs is related to whether or not leadership is continued into a second year.
- 2. The percent of agreement between first-year 4-H leaders who are organizational leaders with and without projects and their respective 4-H agents on the performance of leaders' jobs is related to whether or not leadership is continued into a second year.

Frank D. Alexander, Study of First-Year 4-H Leaders in a Sample of Counties of New York State: 1960-1961, Supplement to Extension Study No. 12, Office of Extension Studies, New York Extension Service, State Colleges of Agriculture and Home Economics, Units of the State University at Cornell University, Ithaca, New York, March, 1966.

This number was not always 97 because there was no information for some jobs in the leaders' questionnaires.

No hypotheses were tested for organizational-only leaders of whom there were only six or for assistant organizational-only leaders of whom there were only 11.

- 3. The percent of agreement between first-year 4-H leaders who are assistant organizational leaders with and without projects and their respective 4-H agents on the performance of leaders' jobs is related to whether or not leadership is continued into a second year.
- 4. The percent of agreement between first-year 4-H leaders who are project-only leaders and their respective 4-H agents on the performance of leaders' jobs is related to whether or not leadership is continued into a second year.

When the relationships stated in the foregoing hypotheses were tested by  $X^2$ , none were significant at the .05 level or less (Table 6).

Table 6

#### General Analysis of Characteristics of All First-Year 4-H Leaders

....

This section of the study undertakes a general analysis of the characteristics of all first-year 4-H leaders. It was included in the study because it was thought that the large body of data available, when analyzed, might provide needed understanding of the adults who volunteer to serve as 4-H leaders.

#### Relationship of Personality Factors of Leaders to Age, Sex, And Residence of the Leaders, and Personality Factors of the Male and Female General Adult Population<sup>2</sup>

The following hypotheses relating to personality factors of the first-year 4-H leaders were tested:

- 1. The personality factors of first-year 4-H leaders are related to their age.
- 2. The personality factors of first-year 4-H leaders are related to their sex.
- 3. The personality factors of first-year 4-H leaders are related to their place of residence.
- 4. The first-year male and female 4-H leaders are similar to the general male and female adult population with respect to personality factors.

According to Table 7, only two of the 16 personality factors of first-year 4-H leaders were found to be significantly related

This and subsequent sections of the study deal with the 434 leaders who continued their leadership into a second year plus the 81 who dropped out at the end of the first year plus the 12 who were omitted from the tenure analysis because of death, moving from the county or ill health.

No assumption of cause and effect was involved in examining these relationships but rather whether or not there were any personality differences relative to age, sex, and place of residence of the first-year 4-H leaders or between the male and female leaders and their opposites in the general population.

by analysis of variance (at the .05 level or less) to the age of these leaders. These were Factor B--low general ability vs. high general ability, and Factor F--glum vs. enthusiastic. Thus, the hypothesis that the personality factors of the first-year 4-H leaders are related to their age is only very partially upheld. The two factors accompanied by descriptive statements with respect to the age groups are listed below: 1

Factor B--low general ability
vs.
high general ability

two younger age groups (under 30 and 30-39) high general ability; oldest age (40 and over) group, low general ability<sup>2</sup>

Factor F--glum vs. enthusiastic

youngest age group (under 30) enthusiastic; two older age groups (30-39 and 40 and over) glum, oldest age group (40 and over) more glum<sup>3</sup>

Throughout the study in giving a descriptive name to a group or subgroup on the scale for a given personality factor wherever sten scores are used, the normal standard mean sten position of 5.5 has been taken as the dividing point between the lower and upper end of each dichotomous scale. Thus when the mean sten score of a group or subgroup falls below 5.5 the personality factor name at the left end of the scale is used to describe the position of the group or subgroup, and when the mean sten score is above 5.5 the personality factor name at the right end of the scale is used. If the sten mean of a group or subgroup is identical with 5.5, then the position is referred to as neutral.

Means for 30-39 and 40+ age groups were significantly different by t test at .05 level or less using two-tail test.

Means for under 30 and 30-39 age groups and the under 30 and 40+ age groups were significantly different at .05 level or less using the two-tail test.

Table 7

Relationship of Personality Factors to Age of First-Year 4-H Leaders

e Personality factors	(1) Under 30	(2) <u>30-39</u>	(3) <u>40+</u>	Significant difference for F at .05 levela

Q <sub>3</sub> - lam vs. controlled	5.7	5.5	5.9	NS
Q4- stable vs. tense	5.5	5.8	5.7	ns

as = significant because at :05 level or less; NS = not significant because not at .05 level or less.

Sten scores were derived from the <u>Handbook Supplement for Form</u>
<u>C of the Sixteen Personality Factor Questionnaire</u>, "The 16 P.F.

Test," Second Edition, 1962, Institute for Personality and Ability
Testing, 1602-04 Coronado Dr., Champaign, Illinois, p. 11, Table 2.

The pairs of numbers within the parentheses refer to the means in the columns numbered (1), (2) and (3) which designate the age groups of leaders. Each pair of numbers indicates that when the t test for mean differences is applied, the means designated by the numbers are significantly different at .05 level or less using the two-tail test. See Appendix E for t formula.

A comparative summary of the two personality factors significantly related to the age of the 4-H leaders follows:

4-H leaders

under 30

4-H leaders

30-39

high general ability high general ability low general ability
enthusiastic glum more glum

Ten of the 16 personality factors of the first-year 4-H leaders were found to be significantly related by analysis of variance (at the .05 level or less) to the sex of the leaders (Table 8). The hypothesis that the personality factors of the first-year 4-H leaders are related to sex is largely supported.

The 10 factors accompanied by descriptive statements with respect to males and females are listed below:

Factor A--aloof vs. .outgoing--both alouf; but males more aloof

Factor E--submissive vs. dominant--both submissive; but females more submissive

Factor I--tough vs. sensitive--males tough; females sensitive

Factor M--conventional vs. eccentric--both conventional; males more conventional

Factor N--simple vs. sophisticated--males sophisticated; females simple

An examination of the distributions of the first-year 4-H leaders' scores on the 16 personality factor test throws further light on the characteristics of the group. The raw scores of the males and females were converted to sten scores for the general adult population with males and females combined. The sten scores for the two groups on each of the 16 personality factors were then distributed according to the sten score scale. These distributions for each factor were cut at the extreme ends of the stem scale which are represented by the values 1-2 and 9-10. The leaders whose scores fall in these categories are markedly deviant from the general population. The percentages which these extremes represent of all leaders of each sex are relatively small for a large majority of the possible extreme categories. Males had percentages above 10 for extremely aloof (19%), conventional (19%), and glum (13%). Females had percentages above 10 for extremely sensitive (19%), conventional (14%), aloof (11%), submissive (10%), and dependent (10%). These data should be of interest to 4-H agents. Further details may be found in Table 1, Appendix G.

Pactor 0--confident vs. insecure--both insecure; females more insecure

Factor Q<sub>1</sub>-conservative vs. experimenting--males experimenting; females conservative

Factor  $Q_2$ -dependent vs. self-sufficient--males self-sufficient; females dependent

Factor Q<sub>3</sub>-lax vs. controlled--males controlled; females neutral (average)

Factor Q4-stable vs. tense--males stable; females tense

A comparative summary of the 10 personality factors significantly associated with the sex of the 4-H leaders follows:

#### Male 4-H leaders

more aloof

submissive

tough

more conventional

sophisticated

insecure

experimenting

self-sufficient

Sten scores were derived from the <u>Handbook Supplement for Form</u>
<u>C of the Sixteen Personality Factor Questionnaire</u>, "The 16 P.F.
Test," Second Edition, 1962, Institute for Personality and Ability Testing, 1602-04 Coronado Dr., Champaign, Illinois, p. 11, Table 2.

Seven of the 16 personality factors of the first-year 4-H leaders were found to be significantly related by analysis of variance (at the .05 level or less) to the place of residence of the leaders (Table 9). Thus, the hypothesis that the personality factors of the first-year 4-H leaders are related to their places of residence is partially supported.

The seven factors accompanied by descriptive statements with respect to each residential group of leaders are given below:

Factor A--aloof vs. outgoing

farm and rural nonfarm leaders, aloof; farm, more aloof; urban, neutral (average)

Factor F--glum vs. enthusiastic

farm and rural nonfarm leaders, glum; farm leaders, more glum; urban, enthusiastic<sup>2</sup>

Factor H--timid vs. adventurous

farm and rural nonfarm leaders, timid; latter, more timid; urban, adventurous

Factor I--tough vs. sensitive

all three residential groups sensitive; urban most, rural nonfarm 2nd rank, farm least4

Factor M--conventional vs. eccentric

all three residential groups conventional; farm most, rural nonfarm 2nd rank, urban least<sup>5</sup>

Farm and urban means were significantly different by t test at .05 level or less using two-tail test.

Farm and rural nonfarm means and farm and urban means were significantly different by t test at .05 level or less using two-tail test.

Farm and urban means and rural nonfarm and urban means were significantly different by t test at .05 level or less using two-tail test.

Farm and rural nonfarm means and farm and urban means were significantly different by t test at .05 level or less using two-tail test.

Farm and urban means were significantly different by t test at .05 level or less using two-tail test.

Factor O--confident vs. insecure

all three residential groups insecure; urban more, farm and nonfarm the same but less!

Factor Q<sub>4</sub>-stable vs. tense

rural nonfarm and urban groups, tense; rural nonfarm more tense; farm, neutral (average)<sup>2</sup>

A comparative summary of the seven personality factors significantly associated with the place of residence of the seven personality factors.

4-H leaders follows:

Farm 4-H leaders	Rural nonfarm 4-H leaders	Urban 4-H leaders
more aloof	aloof	aloof-outgoing (neutral)
more glum	glum	enthusiastic
timid	more timid	adventurous - 4
sensitive	more sensitive	most sensitive :
most conventional insecure	more conventional insecure	conventional more insecure
stable-tense (neutral or average)	more tense	tense

Farm and urban means and rural nonfarm and urban means were significantly different by t test at .05 level or less using two-tail test.

Farm and rural nonfarm means were significantly different by t test at .05 level or less using two-tail test.

ERIC Full Text Provided by ERIC

Sten scores were derived from the <u>Handbook Supplement for Form C of the Sixteen Personality Factor Questionnaire</u>, "The 16 P.F. Test," Second Edition, 1962, Institute for Personality and Ability Testing, 1602-04 Coronado Dr., Champaign, Illinois, p. 11, Table 2.

The pairs of numbers within the parentheses refer to the means in the columns numbered (1), (2), and (3) which designate the three places of residence. Each pair of numbers indicates that, when the t test for mean differences is applied, the means designated by the number are significantly different at .05 level or less using the two-tail test.

The hypothesis that the first-year male and female 4-H leaders are similar to the general male and female adult population with respect to personality factors is supported to a considerable degree (Table 10). It is more true of the male 4-H leaders for whom there are significant differences with the males of the general adult population on mean raw scores for eight of the 16 personality factors than of the female 4-H leaders who differed significantly from those of the general population on mean raw scores for 10 of the 16 personality factors.

If the mean raw scores of the adult population are considered normal (neutral or average with respect to the dichotomous scale for the various factors), then the first-year male and female 4-H leaders are, when compared to adult males and females of the general population, significantly toward those ends of the several factor scales listed below:

Males	<u>Females</u>
aloof	aloof
submissive	high general ability
glum	submi
conscientious	enthusiastic
timid	tough
conventional	trustful
simple	conventional
insecure	simple
	dependent
	. controlled

Factors on which the 4-H males and female leaders were similar (not significantly different) to the males and females of the general population were:

#### Erratum page 63

## Relationship of Selected Characteristics of Leaders to Other Selected Characteristics of These Leaders

Characteristics treated as dependent variables were used for outlining this part of the study. These dependent variables occur as the final variable in each paragraph heading and follow the preposition "to" in all instances. In each instance the independent variable was so designated because it was conceived of as a possible cause, whereas the dependent variable was so designated because it was conceived of as a possible effect.

Relationship of selected personal characteristics of leaders to types of leaders. Since two of the five types of first-year 4-H leaders identified in the study included only a small number, the five types were combined into three for this analysis. The following hypotheses were tested:

- 1. The sex of the first-year 4-H leader is related to the type of leader position which the leader accepts.
- 2. The number of own children in the first-year 4-H leader's Club is related to the type of leader position which the leader accepts.

The five types and their respective numbers were: 1) organizaational-only leaders--6; 2) organizational leaders also responsible for projects--212; 3) assistant organizational-only leaders--11; 4) assistant organizational leaders also responsible for projects--142; and 5) project-only leaders--156. For this section of the study, types (1) and (2) were combined and types (3) and (4).

- 3. The percent of the first-year 4-H leader's own eligible (age) children ever 4-H Club members is related to the type of leader position which the leader accepts.
  - 4. The number of months the first-year 4-H leader expects to serve is related to the type of leader position which the leader accepts.
  - 5. The personality factors of the first-year 4-H leaders are related to the type of leader position which the leader accepts.

When tested by X2 and analysis of variance (F test) in the case of the personality factors, only two of the five hypotheses were supported at the .05 level or less (Table 11). The two hypotheses that were supported were number 1, the sex of the firstyear 4-H leader is related to the type of leader position which the leader accepts and the number 4, the number of months the first-year 4-H leader expects to serve is related to the type of leader position which the leader accepts. Male leaders much more frequently than female leaders had accepted organizational leadership positions and somewhat less frequently assistant organizational and project-only leadership positions. The degree of association between sex and type of leadership position accepted was low as shown by T. As might be anticipated, those who expected to serve a short period of time (4 months or less) were most frequently (69 percent) project leaders, whereas, the organizational leaders are most frequently (47 percent) those leaders who expected to serve from nine to 12 months. The degree of association between length of time expected to serve and type of leadership position accepted was fairly low as shown by T.

Noteworthy is the fact that no personality factor was significantly related to the leadership position which the first-year 4-H leader accepted.

Because of the small number of organizational-only leaders this type of leader has been combined in this table with organizational leaders with projects and for the same reason assistant organizational-only leaders have been combined with assistant organizational leaders with projects.

## Relationship of selected personal characteristics of leaders to sex of leaders. The following hypotheses were tested:

- 1. The place of residence of first-year 4-H leaders is related to the sex of the first-year leaders.
- 2. The age of the first-year 4-H leaders is related to the sex of the first-year 4-H leaders.
- 3. The percent of eligible (age) own children ever 4-H members is related to the sex of the 4-H leaders who had eligible children.

The first hypothesis is supported when tested by  $X^2$  at the .001 level, but the degree of association as shown by T is low (Table 12). The farm leaders had a somewhat higher percent of males than did either the rural nonfarm and urban leaders or than all leaders; the opposite was true for female leaders.

The second hypothesis is not supported when tested by  $X^2$ .

The third hypothesis is supported when tested by X<sup>2</sup> at the .001 level, but the degree of association as shown by T is low. Of the male leaders who had eligible children a higher percent (30) had all of their children who were at some time 4-H Club members than the percent of all males with eligible children was of all leaders with eligible children. On the other hand, of the female leaders who had eligible children there were higher percentages of children in the categories of 0-49, and 50-99 percent of such children who had ever been 4-H Club members than the percent which these female leaders constituted of all leaders who had eligible children. Thus, the male more than the female leaders would appear to be accepting 4-H leadership in response to the degree to which their eligible children have been 4-H members.

. .

Relationship of selected leader characteristics attributable to association with 4-H Clubs to sex of leaders. The following hypotheses were tested:

- 1. The presence of the first-year 4-H leader's children in his (or her) club is related to the sex of the first-year leader.
- 2. The seasonality of the first-year 4-H leader's club is related to the sex of the first-year leader.

When tested by  $X^2$ , the first hypothesis is not supported by the data, but the second one is (Table 13). The summer or spring and summer (or short-term) clubs are the ones which seem to influence the sex distribution of the leaders most sharply. There was a considerably larger percent of male leaders serving these clubs and a considerably smaller percent of the female leaders serving them than the percentages of males and females respectively in school months or eleven months category or in the total group of leaders.

Relationship of types of leaders to other selected leader characteristics attributable to association with 4-H Clubs. The following hypotheses were tested:

- 1. The type of first-year 4-H leader is related to the number of club and/or project meetings which he attends.
- 2. The type of first-year 4-H leader is related to the number of months during year which he served as a leader.

When tested by  $X^2$ , both of these hypotheses are supported at the .001 level, but for both hypotheses the degree of association as shown by T is low (Tables 14 and 15). According to Table 14 the percentage distribution of the project-only leaders differs more sharply than that of the other two groups from the percent of the total group with respect to attendance at a large number of club and project meetings. Compared to the other two types, the project-only leaders had a somewhat smaller percent attending the larger number of meetings, but a somewhat larger percent attending the smaller number of meetings. This is to be expected in view of the more limited responsibilities of project-only leaders and the more limited number of months which they served as leaders (see next paragraph). Organizational leaders with and without projects had a somewhat larger

percent attending 10 or more meetings than did assistant organizational leaders with and without projects. The opposite was true for less than 10 meetings.

In Table 15 the percentage distribution of the projectonly leaders differs more sharply than that of the other two
groups from the percent of the total group with respect to the
greater number of months served. As might be expected in view
of their more limited responsibilities, compared to the other
two groups, the project-only leaders had a somewhat smaller
percent serving most of the year and a larger percent serving
only a few months. The organizational leaders with and without
projects have higher percentages of leaders who served both
9-12 and 5-8 months than was the case with the assistant organizational leaders with and without projects, while the latter
had higher percentages who served from 0-4 months.

# Relationship of Personality Factors of First-Year 4-H Leaders To Agreement with Their 4-H Agents Regarding the Performance Of Jobs 1

The percentages of agreement on performance and nonperformance of the 97 jobs by the five types of leaders and their respective agents were calculated. The 97 jobs were then classified under seven categories, i.e., teaching, morale building, individual and special assistance, club organization and supervision, representing 4-H and promotional, chores, and self-improvement (see Appendix H). The percentages of agreement for the seven types of jobs as well as total jobs were arrayed from low to high and divided into lower and upper halves at the approximate median point. The mean sten scores on each of

There is a tacit assumption in this section that personality factors may have an influence on agreement between leaders and their agents regarding the performance of jobs.

the 16 personality factors were then calculated for the lower and upper halves according to percent of agreement between leaders and their 4-H agents.

The hypothesis which was tested is that there is a relationship between personality factors of the leaders and the high and
low percent of their agreement with their agents on types of
jobs and all jobs performed and not performed. The hypothesis
is not rry strongly supported by analysis of variance (F test)
(Table 16). Of the seven types of jobs, three types showed a
significant relationship between three personality factors and
percentage of agreement, two types showed a relationship between
two personality factors and percentage of agreement, one type
showed a relationship between one personality factor and percentage of agreement and one type showed no relationship.

The personality factors whose mean sten scores for 4-H leaders divided into upper and lower halves on percent of agreement with their 4-H agents were significantly different (at .05 level or less) are presented below by types of jobs with descriptive notes regarding the position of the upper-and-lower-half groups for each personality factor:

#### Teaching jobs

Factor F - glum vs. enthusiastic - upper half enthusiastic; lower half glum

Factor G - casual vs. conscientious - both halves conscientious; upper half more conscientious

#### Morale building jobs

Factor M - conventional vs. eccentric - both halves conventional; lower half more conventional

#### Individual and special assistance jobs

Factor H - timid vs. adventurous - both halves timid; lower half more timid

Factor L - trustful vs. suspecting - lower half suspecting; upper half trustful

Factor Q<sub>4</sub>- stable vs. tense - lower half tense; upper half neutral (average)

#### Representing 4-H and promotional jobs

7:

Factor H - timid vs. adventurous - both halves timid; lower half more timid

Factor O - confident vs. insecure - both halves insecure; lower half more insecure

#### Chore jobs

Factor B - low general ability vs. - upper half high general high general ability ability; lower half neutral (average)

Factor G - casual vs. conscientious - both halves conscientious; lower half more conscientious

Factor M - conventional vs. eccentric - both halves conventional; lower half more conventional

#### Self-improvement jobs

Factor A - aloof vs. outgoing - both halves aloof; lower half more aloof

Factor F - glum vs. enthusiastic - lower half glum; upper half neutral (average)

Factor Q2- dependent vs. - lower half self-sufficient; self-sufficient upper half dependent

#### All jobs

Factor A - aloof vs. outgoing - both halves aloof; lower half more aloof

Factor F - glum vs. enthusiastic - upper half enthusiastic; lower glum

Factor H - timid vs. adventurous - both halves timid; lower half more timid:

A comparative summary of the personality factors significantly associated with upper and lower percent of agreement between 4-H leaders and their 4-H agents for five types of jobs follows:

#### Erratum page 77

### Evaluation by 4-H Agents of Jobs Performed And Not Performed by First-Year 4-H Leaders

gar 4-H leaders were asked in their questionnaires to indicate for 97 jobs whether or not they had done these jobs. Likewise the head 4-H agent in each county from which the sample of leaders was drawn was asked through a questionnaire to indicate for five types of leaders, i.e., organizational-only leaders, organizational leaders with projects, assistant organizational-only leaders, assistant organizational leaders with projects and project-only leaders whether or not he thought these types of leaders should do each of the 97 jobs. Information provided in the leaders' questionnaires provided the basis for their classification according to the five types used in the agent's questionnaire.

Each leader's indication of whether or not he did a job was related to whether or not his 4-H agent thought he should do it. For each job, the number of leaders who did each job was obtained, and the number who did each job and whose 4-H agent approved the performance of this job was also obtained. The latter number was divided by the former to obtain for each job the percent which the number of leaders performing the job with agent approval was of all leaders who performed the job. In addition, for each job, the number of leaders who did not perform the job was obtained, and the number who did not do the job and whose 4-H agent thought this job should be done was also obtained. The latter number was divided by the former to obtain for each job the percent who should have done the job as perceived by their 4-H agents of those leaders not doing

\*:..

In one county where the head 4-H agent was a new employee, the assistant 4-H agent who was in the county during the period of the study responded to the questionnaire which was used to obtain these data.

the job. These percentages, the types of 4-H leaders, and the numbers performing and not performing jobs constitute the data used in this section of the study.

## Relationship of the Number of First-Year 4-H Leaders Performing Jobs to Approval by Their 4-H Agents on Performance of Jobs

The hypothesis tested here is that there is a relationship for jobs between the number of leaders performing the various jobs and the percent of all leaders performing them who did so with their agent's approval. The hypothesis is applied to all leaders and to three types, i.e., 1) organizational leaders with projects, 2) assistant organizational leaders with projects, and 3) project-only leaders. When tested by X<sup>2</sup> the hypothesis was supported for all leaders and for organizational leaders with projects and project-only leaders at the .001 level and for assistant organizational leaders with projects at the .01 level (Table 17, see also Appendix I). The degrees of association for all the leaders and the three types as shown by T were average or in that direction.

In the case of all leaders as well as the three types of leaders, a high percentage of the jobs with high percentages of approval (should do for jobs performed) by 4-H agents had a large number of leaders performing them and a small percentage of the jobs with a high percentage of approval were performed by small numbers of leaders. The reverse of this kind of distribution occurred for jobs with low percentages of approval. Thus, for the first-year 4-H leaders included in the study, approval by their agents of jobs the leaders did occurred more extensively where the numbers performing the jobs were high and less extensively where the numbers performing the jobs were low.

The numbers of organizational-only and assistant organizational-only leaders were too small to be used in testing the hypothesis.

Table 17

Summary for All and Three Types of First-Year 4-H Leaders
On Relationship of Number of Leaders Performing Jobs to
Approval by 4-H Agents on Performance of Jobs

		Percentage distributions of jobs performed								
Classes of leaders	Hypothesis supported & & P level of X2	approved and high numbers	low numbers		Low percent approved & low numbers performing					
Total	Yes-P < .001 x <sup>2</sup> = 17.344 d.f. = 1 T = .4	High % of jobs <sup>C</sup>	Low % of jobs <sup>c</sup>	Low % of jobs <sup>c</sup>	High % of jobs <sup>c</sup>					
Organiz- ational with projects	Yes-P<.001 X <sup>2</sup> = 14.104 d.f. = 1 T = .38	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs					
Assist- ant organis- ational with projects	Yes-P<.02 X <sup>2</sup> = 6.451 d.f. = 1 T = .26	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs					
Project- only	Yes-P < .001 X <sup>2</sup> = 13.553 d.f. = 1 T = .38	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs					

See text (page 84) for statement of hypothesis.

Breaking point for low and high is the median value of the distribution of each variable.

See Appendix I, Tables 1, 2, 3, and 4 for actual percentages.

#### Relationship of the Number of First-Year 4-H Leaders Not Performing Jobs to Disapproval by Their 4-H Agents on Nonperformance of Jobs

The hypothesis tested here is that there is a relationship for jobs between the number of leaders not performing them and the percent which the number of leaders who failed to perform them and should have as perceived by their 4-H agents is of the total number not performing them. The hypothesis is applied to all leaders and to three types of leaders, i.e., 1) organizational leaders with projects, 2) assistant organizational leaders with projects, and 3) project-only leaders. When tested by  $X^2$  the hypothesis is supported at the .001 level for all leaders, organizational leaders with projects and project-only leaders, and at the .01 level for assistant organizational leaders (Table 18; see also Appendix J). The degrees of association for all leaders and the three types as shown by T tended toward average.

In the case of all leaders as well as the three types of leaders, a high percentage of the jobs with low percentages of disapproval (should do for jobs not performed) by 4-H agents had a large number of leaders not performing them and a small percentage of the jobs with a low percentage of disapproval were not performed by small numbers of leaders. The reverse of this kind of distribution occurred for jobs with high percentages of disapproval by agents. Thus, for the first-year 4-H leaders included in the study, disapproval by their agents of jobs the leaders did not do occurred to a lesser extent where the number not performing them was large and to a greater extent where the number of leaders not performing them was small.

Table 18

Summary for All and Three Types of First-Year 4-H Leaders on Relationship of Number of Leaders Not Performing Jobs and Disapproval by Their 4-H Agents on Nonperformance of Jobs

		Percentage distributions of jobs not performed			
Classes of leaders	Hypothesis supported <sup>a</sup> & P level of X <sup>2</sup>	disapproved and high numbers not	disapproved and low numbers not	High percent disapproved and high numbers not performing	High percent disapproved and low numbers not performing
Total	Yes-P<.001 X <sup>2</sup> = 12.666 d.f. = 1 T = .36	High % of jobs <sup>c</sup>	Low % of jobs <sup>c</sup>	Low % of jobs <sup>c</sup>	High % of jobs <sup>c</sup>
Organiz- ational with projects	Yes-P<.001 X <sup>2</sup> = 19.055 d.f. = 1 T = .44	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs
Assist- ant organiz- ational with projects	Yes-P < 01 X <sup>2</sup> = 7.541 d.f. = 1 T = .28	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs
Project- only	Yes-P < .001 X <sup>2</sup> = 12.666 d.f. = 1 T = .36	High % of jobs	Low % of jobs	Low % of jobs	High % of jobs

<sup>&</sup>lt;sup>a</sup>See text (page 86) for statement of hypothesis.

Breaking point for low and high is the median value of the distribution of each variable.

See Appendix J, Tables 1, 2, 3, and 4 for actual percentages.

Summary of Approval and Disapproval by 4-H Agents of Jobs Performed and Not Performed by Their First-Year 4-H Leaders In Relationship to Numbers of Leaders Performing or Not Performing the Jobs

when jobs are examined positively, namely, <u>leaders did jobs</u> and should have as perceived by their 4-H agents, the number of jobs done by leaders was greater when the percentages of approval (should do) were high and the numbers doing them large. On the other hand, when jobs are examined negatively, namely, <u>leaders</u> did not do jobs but should have as perceived by their 4-H agents, the number of jobs not done by leaders was greater when the percentages of disapproval (should do) were low and the numbers of leaders not performing them was large. Thus, in general when jobs were done or not done by large numbers of leaders, those jobs were most numerous where there was greatest agreement between leaders and agents concerning their performance.

Jobs with Relatively High Numbers of Leaders Performing Them and Low Percentages of Leaders Should (According to Their 4-H Agents)
And Did of All Jobs Done!

year 4-H leaders reacted as to whether or not they had performed them, were listed according to the number of leaders doing each job and by percent of leaders who did the job and should have according to their 4-H agents. If more than 100 leaders doing a job is taken as a sufficiently large number to warrant attention and if those jobs having from 0 to 29 percent should do as seen

All leaders and three major types of leaders are included in this section. Because of small numbers organizational-only and assistant organizational-only leaders are excluded.

Frank D. Alexander, Study of First-Year 4-H Leaders in a Sample of Counties of New York State: 1960-1961, Supplement to Extension Study No. 12, Office of Extension Studies, New York Extension Service, State Colleges of Agriculture and Home Economics, Units of the State University at Cornell University, Ithaca, New York, March, 1966.

The largest number of all leaders doing any one job was 499.

by 4-H agents of those leaders doing them are judged as representing considerable disagreement between leaders and their agents, then the jobs listed below and classified by types should provide a useful list for the consideration of those concerned with more effective understanding between 4-H leaders and agents regarding the kinds of activities in which leaders become involved. The large number of chore jobs in the list is noteworthy.

#### Local Club Organization and Supervision

- 40. Plan local 4-H events such as 4-H parties and achievement nights.
- 46. Enter exhibits at county fair.

#### Chores

- 53. Transport 4-H members to and/or from local 4-H Club meetings.
- 54. Transport 4-H members to and/or from local 4-H Club events.
- 58. Furnish food for local 4-H Club meetings.
- 59. Furnish food for local 4-H Club events
- 61. Prepare food or help prepare food for local 4-H Club events.
- 62. Transport projects to local 4-H Club events.
- 63. Transport projects to county 4-H Club events.
- 64. Transport projects to county fairs.
- 66. Clean up place after community 4-H events.
- 67. Clean up and/or arrange exhibit or judging area for members' project work at county fair or county achievement day.
- 68. Provide food or other materials for county 4-H events or activities.

The various lists of jobs presented in this section of the study have numbers accompanying each job. These are reference numbers which have been retained to facilitate the use of the material, especially in connection with supplementary report no. 12. (See footnote 2, page 88.)

#### Individual and Special Assistance

- 77. Do special work on a member's project that has possibility of winning an award.
- 79. Actually do some of the project work in order to get it finished.
- 80. Actually do some of the work on the project records in order to get them finished.

#### Morale Building

95. Lead recreation in local 4-H meetings.

First-year 4-H organizational leaders with projects. The 97 jobs to which the organizational leaders with projects reacted as to whether or not they had performed them were listed according to the number of this type of leader doing each job and by percent who did the job and should have according to their 4-H agents. If more than 50 leaders doing a job is taken as a sufficiently large number to warrant attention and if those jobs having from 0 to 29 percent should do as seen by 4-H agents of those leaders doing them are judged as representing considerable disagreement between leaders and their agents, then the jobs listed below and classified by types should provide a useful list for the consideration of those concerned with more effective understanding between 4-H organizational leaders with projects and agents regarding the kinds of activities in which these leaders become involved. The relatively large number of chore jobs in the list is noteworthy.

#### Local Club Organization and Supervision

- 40. Plan local 4-H events such as 4-H parties and achievement nights.
- 46. Enter exhibits at county fair.

<sup>&</sup>lt;sup>1</sup>Alexander, <u>op. cit.</u>, p. 88.

<sup>&</sup>lt;sup>2</sup>The largest number of this type of leader doing any one job was 207.

#### Chores

- 53. Transport 4-H members to and/or from local 4-H Club meetings
- 54. Transport 4-H members to and/or from local 4-H Club events.
- 58. Furnish food for local 4-H Club meetings.
- 59. Furnish food for local 4-H Club events.
- 60. Prepare food or help prepare food for local 4-H Club meetings.
- 61. Prepare food or help prepare food for local 4-H Club events.
- 62. Transport projects to local 4-H Club events.
- 63. Transport projects to county 4-H Club events.
- 64. Transport projects to county fairs.
- 66. Clean up place after community 4-H events.
- 67. Clean up and/or arrange exhibit or judging area for member's project work at county fair or county achievement day.

#### Individual and Special Assistance

- 77. Do special work on a member's project that has possibility of winning an award.
- 79. Actually do some of the project work in order to get it finished.

#### Morale Building

- 93. Lead singing at local 4-H Club events.
- 94. Lead singing at county 4-H Club events.
- 95. Lead recreation in local 4-H meetings.

First-year 4-H assistant organizational leaders with projects.

The 97 jobs to which the assistant organizational leaders with projects reacted as to whether or not they had performed them were listed according to the number of this type of leader doing

#### Errata

In footnote 1, pages 90,92,93,99, and 101 and footnote 2, pages 94 and 96, the page 88 refers to the page of this report on which the reference first appears and not to that page of the reference.

each job and by percent who did the job and should have according to their 4-H agents. <sup>1</sup> If more than 50 leaders doing a job is taken as a sufficiently large number to warrant attention, <sup>2</sup> and if those jobs having from 0 to 29 percent should do as seen by 4-H agents of those leaders doing them are judged as representing considerable disagreement between leaders and their agents, then the jobs listed below and classified by types should provide a useful list for the consideration of those concerned with more effective understanding between 4-H assistant organizational leaders with projects and agents regarding the kinds of activities in which these leaders become involved. The relatively large number of chore jobs in the list is noteworthy.

#### Local Club Organization and Supervision

- 40. Plan local 4-H events such as 4-H parties and achievement nights.
- 46. Enter exhibits at county fair.

#### **Chores**

- 53. Transport 4-H members to and/or from local 4-H Club meetings.
- 54. Transport 4-H members to and/or from local 4-H Club events.
- 58. Furnish food for local 4-H Club meetings.
- 59. Furnish food for local 4-H Club events.
- 61. Prepare food or help prepare food for local 4-H Club events.
- 62. Transport projects to local 4-H Club events.
- 63. Transport projects to county 4-H Club events.
- 64. Transport projects to county fairs.
- 66. Clean up place after community 4-H events.

Alexander, op. cit., p. 88.

The largest number of this type of leader doing any one job was 137.

First-year 4-H project-only leaders. The 97 jobs to which the project-only leaders reacted as to whether or not they had performed them were listed according to the number of this type of leader doing each job and by percent who did the job and should have according to their 4-H agents. If more than 50 leaders doing a job is taken as a sufficiently large number to warrant attention, and if those jobs having from 0 to 29 percent should do as seen by 4-H agents of those leaders doing them are judged as representing considerable disagreement between leaders and their agents, then the jobs listed below and classified by types should provide a useful list for the consideration of those concerned with more effective understanding between 4-H project-only leaders and agents regarding the kinds of activities in which these leaders become involved. The large number of chore jobs in the list is noteworthy.

#### Local Club Organization and Supervision

- 46. Enter exhibits at county..fair.
- 52. Get materials needed for local 4-H events (parties, camp, etc.).

#### Chores

- 53. Transport 4-H members to and/or from local 4-H Club meetings.
- 54. Transport 4-H members to and/or from local 4-H Club events.
- 58. Furnish food for local 4-H Club meetings.
- 59. Furnish food for local 4-H Club events.
- 62. Transport projects to local 4-H Club events.
- 63. Transport projects to county 4-H Club events.
- 64. Transport projects to county fairs.
- 66. Clean up place after community 4-H events.

Alexander, op. cit., p. 88.

The largest number of this type of leader doing any one job was 147.

#### Individual and Special Assistance

- 75. Provide project material for members to use when they forget to bring their own.
- 77. Do special work on a member's project that has possibility of winning an award.

Jobs with Relatively High Numbers of Leaders Not Performing
Them and High Percentages of Leaders Should Have (According
To Their 4-H Agents) and Did Not Perform Them of All Jobs Not
Performed 1

All first-year 4-H leaders. The 97 jobs to which all first-year 4-H leaders reacted as to whether or not they had performed them were listed according to the number of all leaders not performing each job and by percent of leaders who did not perform the job but should have according to their 4-H agents. 2 If more than 100 leaders not performing a job is taken as a sufficiently large number to warrant attention,3 and if those jobs having from 80 to 100 percent should do as seen by 4-H agents of those leaders not doing them are judged as representing considerable disagreement (large extent of disapproval -- should do related to did not do) between leaders and their agents, then the jobs listed below and classified by type should provide a useful list for the consideration of those concerned with better understanding between 4-H leaders and agents regarding the kinds of activities in which leaders become involved. Almost two fifths of the jobs in the list are related to teaching.

#### Teaching

7.4 Give demonstrations at local 4-H Club meetings.

All leaders and three major types of leaders are included in this section. Because of small numbers organizational-only and assistant organizational-only leaders are excluded.

<sup>&</sup>lt;sup>2</sup>Alexander, <u>op. cit.</u>, p. 88.

The largest number of all leaders not doing any one job was 516.

<sup>&</sup>lt;sup>4</sup>See footnote 1, page 89.

- 8. Train members to demonstrate.
- 9. Train members to judge.
- 19. Show or teach 4-H members how to fill out their project records in local 4-H Club meetings.
- 24. Show or teach 4-H members how to fill out their project records individually.
- 25. Show or teach 4-H members how to fill out their project records as a group.
- 26. Discuss individually with 4-H members for whom leader is responsible, which 4-H project they should carry.
- 27. Discuss as a group with 4-H members for whom leader is responsible, which 4-H project they should carry.
- 28. Discuss individually with members their achievement at end of project year.
- 29. Discuss as a group with 4-H members their achievement at end of the project year.

#### Local Club Organization and Supervision

- 35. Persuade 4-H members to get their record books in on time.
- 41. Attend local 4-H Club events.
- 42. Chaperone local 4-H Club events.
- 47. Serve on county-wide (or district wide) 4-H committees of adults.
- 48. Fill out forms the county extension office asks for.
- 49. Have the club meet in leader's own home.
- 50. Attend local 4-H Club meetings held outside of leader's own home.

#### Representing 4-H and Promotional

74. Explain to parents what 4-H work is and what is expected of them.

#### Individual and Special Assistance

78. Counsel older 4-H members on personal problems.

#### Self Improvement<sup>1</sup>

- 82. Practice the giving of demonstrations before giving them at local 4-H Club meetings.
- 84. Attend 4-H leader training meetings in the community.
- 85. Attend 4-H district leader training.
- 86. Attend county-wide 4-H leader training meetings.
- 88. Attend 4-H leader association meetings.
- 89. Go to county extension office for materials or help.
- 90. Make telephone calls to county extension office for materials or help.
- 91. Receive county extension worker in own home to discuss 4-H work.

First-year organisational leaders with projects. The 97 jobs to which the first-year 4-H organisational leaders with projects reacted as to whether or not they had performed them were listed according to the number of this type of leader not performing each job and by percent who did not perform the job but should have according to their 4-H agents. If more than 50 leaders not performing a job is taken as a sufficiently large number to warrant attention, and if those jobs having from 80 to 100 percent should do as seen by 4-H agents of those leaders not doing them are judged as representing considerable disagreement, (large extent of disapproval--should do as related to did not do) between leaders and their agents, then the jobs listed below and classified by type should provide a useful list for the consideration of those concerned with better understanding between 4-H organizational leaders with projects

It is possible that some of the self-improvement jobs which leaders failed to perform were not done because their was no opportunity for doing them, as for example, attending district leader training. Even though such opportunities were not available, the 4-H agents may have thought they should be.

Alexander, op. cit., p. 88.

The largest number of this type of leader not doing any one job was 205.

and agents regarding the kinds of activities in which these leaders become involved. About one third of the jobs in the list are related to teaching and another one third to local club organization and supervision.

#### Teaching

- 6. Give talks at local 4-H Club meetings.
- 7. Give demonstrations at local 4-H Club meetings.
- 8. Train members to demonstrate.
- 9. Train members to judge.
- 11. Train members to preside.
- 13. Help 4-H members plan local 4-H events such as 4-H parties and achievement nights.
- 14. Supervise one or more 4-H community service activities.
- 20. Show or teach 4-H members how to fill out their project records in leader's own home.
- 24. Show or teach 4-H members how to fill out their project records individually.
- 26. Discuss individually with 4-H members for whom the leader is responsible which 4-H project they should carry.
- 28. Discuss individually with members their achievement at end of project year.
- 29. Discuss as a group with 4-H members their achievement at the end of the project year.

#### Local Club Organisation and Supervision

- 30. Recruit 4-H members.
- 31. Assist in getting club started.
- 37. Help with local 4-H Club fund raising activities for 4-H Club work.
- 38. Attend local 4-H Club committee meetings held at different time than local 4-H Club meetings.
- 41. Attend local 4-H Club events.

- 42. Chaperone local 4-H Club events.
- 43. Order materials from firms, magazines and so forth for the use of 4-H members.
- 44. Ask other adults in community to help with 4-H work.
- 47. Serve on county-wide (or district wide) 4-H committees of adults.
- 50. Attend local 4-H Club meetings held outside of leader's own home.
- 52. Get materials needed for local 4-H Club events, parties, camp, etc.

#### Representing 4-H and Promotional

73. Explain 4-H work at adult meetings such as Grange, PTA, Church, etc.

#### Individual and Special Assistance

78. Counsel older 4-H members on personal problems.

#### Self Improvement

ERIC

- 82. Practice the giving of demonstrations before giving them at local 4-H Club meetings.
- 84. Attend 4-H leader training meetings in the community.
- 85. Attend 4-H district leader training.
- 86. Attend county-wide 4-H leader training meetings.
- 87. Attend 4-H leader training meetings outside county.
- 88. Attend 4-H leader association meetings.
- 89. Go to the county extension office for materials or help.
- 90. Make telephone calls to county extension office for materials or help.
- 91. Receive county extension worker in own home to discuss 4-H work.

First-year assistant organizational leaders with projects. The 97 jobs to which the first-year 4-H assistant organizational leaders with projects reacted as to whether or not they had performed them were listed according to the number of this type of leader not performing each job and by percent who did not perform the job and should have according to their 4-H agents. 1 If more than 50 leaders not performing a job is taken as a sufficiently large number to warrant attention. 2 and if those jobs having from 80 to 100 percent should do as seen by the 4-H agents of those leaders not doing them are judged as representing considerable disagreement (large extent of disapproval -- should do as related to did not do) between leaders and their agents, then the jobs listed below and classified by type should provide a useful list for the consideration of those concerned with better understanding between 4-H assistant organizational leaders with projects and agents regarding the kinds of activities in which these leaders become involved. About two fifths of the jobs in the list are related to teaching.

#### Teaching

- 6. Give talks at local 4-H Club meetings.
- 7. Give demonstrations at local 4-H Club meetings.
- 8. Train members to demonstrate.
- 9. Train members to judge.
- 10. Train members to lead recreation.
- 13. Help 4-H members plan local 4-H events such as 4-H parties and achievement nights.
- 14. Supervise one or more 4-H community service activities.
- 26. Discuss individually with 4-H members for whom the leader is responsible, which 4-H project they should carry.

Alexander, op. cit., p. 88.

The largest number of this type of leader not doing any one job was 140.

- 28. Discuss individually with members their achievement at end of the project year.
- 29. Discuss as a group with 4-H members their achievement at end of the project year.

#### Local Club Organization and Supervision

- 30. Recruit 4-H members.
- 38. Attend local 4-H Club committee meetings held at different time than local 4-H Club meetings.
- 42. Chaperone local 4-H Club events.
- 47. Serve on county-wide (or district-wide) 4-H committees of adults.

#### Representing 4-H and Promotional

- 73. Explain 4-H work at adult meetings such as Grange, PTA, church, etc.
- 74. Explain to parents what 4-H work is and what is expected of them.

#### Individual and Special Assistance

78. Counsel older 4-H members on personal problems.

#### Self Improvement

ERIC

#### APPENDIX A

FORM FOR OBTAINING INFORMATION ON RECORDS OF LOCAL 4-H LEADERS AVAILABLE IN COUNTY FILES

FEDERAL EXTENSION SERVICE Prepared by Laurel K. Sabrosky U. S. Department of Agriculture April 1960

# RECORDS OF LOCAL 4-H LEADERS AVAILABLE IN COUNTY FILES (To be filled out by the Extension Staff in each county in each of the Northeastern Region States)

Name	of county State Date
1.	During a year's time, do you receive in your office the names and addresses (or home locations) of each local 4-H Club leader in your county? Yes No
2.	If NO, to what extent is your list for any given year complete? Almost complete At least three-fourths complete?
3.	By what date of the year do you expect to have a complete list, or as complete a list as you do get?
4.	Do you try to have the names come in to you at a certain time, or do they come in at any time from the beginning of your 4-H Club year until the date you gave in answer to Question 3?  At a certain time (What month?) At any time
5.	What 12-month period do you consider to be your "4-H Club year?" From To
6.	What is the earliest month in your 4-H year that clubs are organized?
7.	What is the latest month in your 4-H year that clubs are organized?
8.	Do your local 4-H Club leader records include tenure of the leader? Yes No
9.	How long do you keep your leader records after a leader has decided not to continue as a leader? For several years Discard as soon as we know Other
10.2	. If you were asked to send in to the State office a list of all of your first-year local 4-H Club leaders on a certain date, how long would it take you to complete this list from your office records? hours
b	. Would your available records be adequate for a complete list of first-year leaders, or would you have to know a year shead of time and keep special records?  Present records adequate Would need to keep special records

## APPENDIX B FORM FOR OBTAINING CENSUS OF 4-H CLUB LEADERS

FEDERAL EXTENSION SERVICE U.S. Department of Agriculture

Ner 10 (Number years of 4-H leadership, (Check) including this year) County State Tenure Date CENSUS OF 4-H CLUB LOCAL LEADERS IN NORTHEASTERN REGION <u>r</u> Sex Z Totals: Name of leader No. different leaders ..... lub name clubs No. different

Prepared by Laurel K. Sabrosky - September 1959.

(6-26)

FEDERAL EXTENSION SERVICE USDA

September 1959
Prepared by:
Laurel K. Sabrosky

#### **Definitions**

#### Definition of a 4-H Club Local Leader:

In this Census, a 4-H Club Local Leader is a leader or coleader or assistant leader or project leader of a local (or in some cases, a county-wide) 4-H Club. He or she <u>must not</u>, also, be a 4-H member--that is, carry any 4-H project, <u>not even junior</u> leadership. Temporary project teachers are not included, nor are sponsoring committee members, or persons who act as representatives of the county extension worker, or serve on advisory committees or councils but who are not actually responsible for a club, or some part of it. Leaders less than 21 years of age are included if they are not counted as 4-H Club members.

#### Definition of tenure:

The length of the project year for a 4-H Club is considered a "year" of tenure, although a person cannot be considered to have served more than 1 "year" of leadership within a 12-month period. Years as a "junior leader" cannot be counted. Years of 4-H leadership in another county or State should be counted, if known.

ER&T - 146 (9-59)

- 5. Urban living in a place of 2500 or more

#### DEFINITION OF FIRST-YEAR LEADER INCLUDED IN THE NORTHEASTERN 4-H CLUB STUDY OF FIRST-YEAR LEADERS

In this study, a 4-H Club Local Leader is a leader, coleader, assistant leader, or project leader of a local 4-H Club (or, in some cases, of a district-wide or county-wide 4-H Club). Local leaders are usually those listed on club records as their leaders. A person, to be a leader, either has responsibility for the club or for one or more projects, or is a full-time assistant to the person responsible for the club or for one or more projects. Age has nothing to do with whether a person is a leader, as long as he is not also a 4-H Club member.

#### DO NOT INCLUDE:

- (1) Leaders who are also 4-H Club members, even if the only project they carry is the junior leadership project.
- (2) Resource people who are asked to teach one phase of the project but have no responsibility for deciding whether that phase should even be included in the project. Such a person (a resource person) often teaches in just one meeting, or in a very few meetings.
- (3) Sponsoring committee members or persons who act as representatives of the county extension worker, or serve on advisory committees or councies, but who are not actually responsible for a club or some part of it.

#### What a first-year leader is:

For this study, a first-year leader is a local leader who has started his first year as a leader during the year studied. Years of experience as a junior 4-H leader are not counted. The time when a person drops out of 4-H Club work as a member and becomes only a local 4-H leader is the beginning of his first year, for this study. If the leader has had experience as a local leader in another county or State prior to being a leader in the county included in the study, he is not a first-year leader and should not be included. The month when the first-year leader starts and the month he quits (should he quit before the project year is ended) make no difference, as long as his starting month is within the year studied.

Even though a leader may have dropped out of 4-H Club work early in the project year, or started very late in the project year, include him in the study. Whether or not his questionnaire can be used will be determined when the data are analyzed.

APPENDIX D

QUESTIONNAIRE FOR 4-H AGENTS

#### 4-H CLUB AGENT'S AND STATE LEADER'S PERCEPTIONS OF THE JOB OF 4-H CLUB LEADERS

Per	sonal information
1.	Name 2. County (For agents only)
3.	Male; Female
4.	Age
5.	Number of years:
•	a. You have worked as a 4-H Club agent: years
	b. You have worked as a 4-H Club agent in this county (for agents only) years
	c. You have worked as a 4-H Club state leader (state leaders only) years
6.	Number of years:
	a. You were a 4-H Club adult <u>local</u> leader: years
	b. You were a 4-H Club junior leader: years
	c. You were a 4-H Club member: years
7.	College degrees (check)
	a. B.S. or B.A ; Major subject (write in)
	Minor subject (write in)
	b. M.S. or M.A; Major subject (write in)
	Minor subject (write in)

APPENDIX E
STATISTICAL FORMULAS USED IN STUDY

#### Chi-Square Formula

$$x^2 = NP - N$$

where N = total number in sample

and P = an intermediate measure

For calculation of this see page 373 of Statistics for Sociologists by M. J. Hagood and D. O. Price; Holt, Rinehart and Winston, Revised Edition, 1960. For Chi-Square table giving probabilities see Appendix Table E, page 561, same text.

#### Formula for Analysis of Variance

#### F = greater mean square variance lesser mean square variance

For distribution of F see Table 10.3, pages 184-187 in <u>Statistical Methods</u> by George W. Snedecor, Third Edition, 1940, The Collegiate Press, Inc.

#### Formula for Test of Degree of Association for Chi-Square

$$\phi^2 = \frac{x^2}{N}$$

$$T^2 = 0^2$$
 $\sqrt{(s-1)(t-1)}$ 

where s = number of rows

t = number of columns

See pages 370 and 371 of Statistics for Sociologists, by Margaret J. Hagood and Daniel O. Price, 1960 Revised Edition, 1962, Holt, Rinehart and Winston.

# Yates' Formula for Correction for X2

$$x^2 = \sum_{\text{fe}} \frac{(|f_0 - f_e| - .5)^2}{f_e}$$

where fo = observed frequency

fe = expected frequency

See page 154, <u>Information and Error</u> by Solomon Diamond, 1959, Basic Books, Inc.

#### Formula for t Test

$$t = \frac{M_1 - M_2}{\sqrt{\frac{s^2}{N_1} + \frac{s^2}{N_2}}}$$

where  $M_1$  = mean of sample 1

M<sub>2</sub> = mean of sample 2

N<sub>1</sub> = number in sample 1

 $N_2$  = number in sample 2

and 
$$s^2 = \frac{\sum (X - M_1)^2 + \sum (X - M_2)^2}{N_1 + N_2 - 2}$$

See pages 102 and 103 of <u>Psychological Statistics</u> by Quinn McNemar, 1962, John Wiley and Sons, Inc. for further discussion.

Formula for Testing Significance of Difference Between Mean Scores of 16 Personality Factors for Males and Females of 4-H Sample and Adult Males and Females of General Population

$$\frac{x}{\sigma} = \frac{\bar{x} - \bar{x}}{\bar{x}}$$

ERIC

 $\frac{X}{\sigma}$  = a deviation divided by its standard error

 $\bar{X}$  = the arithmetic mean of a sample

 $\bar{X}_{p}$  = the arithmetic mean of a population

 $\sigma_{\bar{X}}$  = the standard error of  $\bar{X}$ 

To obtain X we use this formula:

where O = the standard deviation of a population and N = the number of items in a sample when  $\frac{X}{O}$  is obtained refer to Appendix H, p. 749 in 2nd edition of Applied General Statistics, F. E. Croxton and D. J. Cowden, Prentice Hall, Inc. 1955 for P value.

### APPENDIX F EXPLANATION OF THE SIXTEEN PERSONALITY FACTORS

### THE SIXTEEN PERSONALITY FACTORS 1

(Low Scoring)

Factor A

(High Scoring)

(Range of raw scores from 0-12)

ALOOF (Schizothymia). . . . . . . . . . . . OUTGOING, WARM (Cyclothymia)

The person who scores low on Factor A tends to be stiff, cool, aloof. He likes things rather than people, working alone, and avoidance of clash of viewpoints. He is apt to be precise and "rigid" in his way of doing things and in personal standards, and in many occupations these are desirable traits. He may tend, at times, to be critical, obstructive, or hard.

The person who scores high on Factor A tends to be good-natured, easy-going, ready to cooperate, attentive to people, soft-hearted, kindly, trustful, adaptable. He likes occupations dealing with people and socially impressive situations. He readily forms active groups. He is generous in personal relations, less afraid of criticism, better able to remember names of people. But he is often less dependable in precision work and in obligations.

## (Range of raw score from 0-8)

The person scoring low on Factor B tends to be slow to learn and grasp, dull, sluggish. He tends to have little taste or capacity for the higher forms of knowledge, and to be somewhat boorish and rude.

The person who scores high on Factor B tends to be quick to grasp ideas, a fast learner, intelligent. He is usually persevering, conscientious, cultured, a man with character.

## Factor C (Range of raw scores from 0-12)

EMOTIONAL (General Instability). . versus . . . . MATURE (Ego Strength)

The person who scores low on Factor C tends to be emotionally immature, lacking in frustration tolerance, changeable, evasive, neurotically fatigued, prone to worry, easily annoyed by things and people, generally dissatisfied, having various neurotic symptoms (phobias, sleep disturbances, psychosomatic complaints, etc.)

The person who scores high on Factor C tends to be emotionally mature, stable, calm, phlegmatic, realistic about life, placid, possessing ego strength, having an integrated philosophy of life, better able to maintain high group morale.

Cattell, Raymond B., Research Professor in Psychology, Univ. of Ill., published by the Institute for Personality and Ability Testing, 1602-04 Coronado Drive, Champaign, Ill., 1956.

<sup>&</sup>lt;sup>2</sup>Designations for this factor have been slightly modified by the author.

## (Range of raw scores from 0-12)

The person who scores low on Factor E tends to be dependent, a follower, to lean on others in making decisions and taking action, to go along with the group. He is often soft-hearted, expressive, and tends to be easily upset.

The person who scores high on Factor E tends to be ascendant, self-assured, assertive, independent-minded, bold and courageous in his approach to situations. He may at times be hard, stern, solemn, unconventional, tough-minded.

## Range of raw scores from 0-12)

The person who scores low on Factor F tends to be taciturn, reticent, introspective. He is sometimes incommunicative, melancholic, anxious, depressed, smug, languid, slow.

The person who scores high on this trait tends to be cheerful, talkative, frank, expressive, quick, alert, unperturbable. He is frequently chosen as an elected leader.

## Factor G (Range of raw scores from 0-12)

CASUAL (Weakness of Character). . . versus . . CONSCIENTIOUS (Super-Ego Strength)

The person who scores low on Factor G tends to be fickle, irresolute, unsteady, undependable, quitting. He is sometimes demanding, impatient, indolent, obstructive, lacking in internal standards.

The person who scores high on Factor G tends to be strong in character, responsible, determined, persevering, consistent, planful, energetic, cautious, well-organized. He is usually conscientious, attentive to others, emotionally mature. He has a high regard for moral standards, and prefers efficient people to other companions.

## Factor H (Range of raw scores from 0-12)

TIMID (Withdrawn Schizothymia). . . . versus . . ADVENTUROUS (Adventurous Cyclothymia)

The person who scores low on this trait tends to be shy, withdrawing, cautious, retiring, cool, aloof. He usually has inferiority feelings. He tends to be slow and impeded in speech and in expressing himself, dislikes occupations with personal contacts, prefers one or two close friends to large groups, and is not able to keep in contact with all that is going on around him.

The person who scores high on Factor H tends to be sociable, participating, ready to try new things, spontaneous, abundant in emotional response. He is able to face wear and tear in dealing with people and gruelling emotional situations, without fatigue. However, he can be careless of detail, ignore danger signals, and consume much time talking. He may be artistic, poetic or sentimental, and active in interest in the opposite sex.

## (Range of raw scores from 0-12)

TOUGH (Toughness) . . . . . . . . . . . . . . . . SENSITIVE (Sensitivity)

The person who scores low on Factor I tends to be practical, realistic, masculine, independent, responsible. He is sometimes phlegmatic, hard, cynical, smug. He tends to keep a group operating on a practical and realistic basis.

The person who scores high on Factor I tends to be tender-minded, imaginative, introspective, artistic, fastidious, excitable. He is sometimes demending impatient, dependent, impractical. He dislikes crude people and rough occupations. He tends to slow up group performance, and to upset group morale by negative remarks.

## Range of raw scores from 0-12)

TRUSTFUL (Lack of Paranoid . . . versus .SUSPECTING (Paranoid Tendency)

Tendency)

The person who scores low on Factor L tends to be free of jealous tendencies, adaptable, cheerful, composed, concerned about other people, a good team worker.

The person who scores high on Factor L tends to be mistrusting and doubtful. He is often involved in his own ego, is self-opinionated, and interested in internal, mental life. He is usually deliberate in his actions, unconcerned about other people, a poor team member.

## Range of raw scores from 0-12)

The person who scores low on Factor M tends to be conscientious, anxious to do the right thing, practical. He is easily concerned and expressive, and able to keep his head in emergencies. He is often rather narrowly correct.

The person who scores high on Factor M tends to be unconventional, unconcerned, bohemian, egocentric, sensitive, imaginative. He sometimes makes emotional scenes, is somewhat irresponsible, impractical, undependable. He is often rejected in group situations.

## (Range of raw scores from 0-12)

The person who scores low on Factor N tends to be unsophisticated and simple. He is easily pleased and sometimes crude and swkward.

The person who scores high on Factor M tends to be polished, experienced, worldly. He is sometimes aloof, fastidious, hard-headed, analytical. He has an intellectual, unsentimental approach to situations.

. .....

## (Range of raw scores from 0-12)

CONFIDENT (Freedom from Anxiety). .versus . .INSECURE (Anxious Insecurity)

The person who scores low on Factor O tends to be placed, calm, with unshakable nerve. He has a mature, unanxious confidence in himself and his capacity to deal with things.

The person who scores high on Factor O tends to be depressed, moody, a worrier, suspicious, brooding, avoiding people, perturbed by his own mood changes. He has a childlike tendency to anxiety in difficulties. He does not feel accepted in groups or, free to participate.

### Factor Q1

(Range of raw scores from 0-12)

The person who scores low on Factor Q<sub>1</sub> tends to be overly cautious and moderate. He is opposed to any change.

The person who scores high on Factor  $Q_1$  tends to be interested in intellectual matters and fundamental issues. He frequently takes issue with ideas, either old or new. He tends to be more well informed, less inclined to moralize and more inclined to experiment in life generally, more tolerant of inconveniences.

### Factor Q2

(Range of raw scores from 0-12)

DEPENDENT (Group Dependence) . . . versus . SELF-SUFFICIENT (Self-Sufficiency)

The person who scores low on Factor Q<sub>2</sub> prefers to work and make decisions with other people, likes social approval and admiration. He tends to be conventional and may be lacking in resolution.

ERIC

The person who scores high on Factor  $Q_2$  tends to be independent, resolute, accustomed to going his own way, making decisions and taking action on his own. He is not, however, necessarily dominant in his relations with others (see Factor E).

### Factor Q3

(Range of raw scores from 0-12)

LAX (Lack of Stability) . . . . . . . . . . . . . . . . . . CONTROLLED (Will Control)

The person who scores low on Factor  $Q_3$  tends to lack will control and character stability. He is not too considerate, careful, or conscientious.

The person who scores high on Factor  $Q_3$  tends to have strong control of his emotions and general behavior, is inclined to be considerate, careful, and conscientious. He sometimes tends, however, to be obstinate. Effective leaders are high on  $Q_3$ .

## Factor Q<sub>4</sub> (Range of raw scores from 0-12)

STABLE (Relaxation) . . . . . . . . . . . . . . . . TENSE (Somatic Anxiety)

The person who scores low on Factor  $Q_{\underline{A}}$  tends to have a good emotional stability and freedom from the various nervous and instability symptoms.

The person who scores high on Factor Q<sub>4</sub> tends to be tense, excitable, restless, fretful, impatient. He is often overfatigued, but unable to remain inactive. He takes a poor view of group unity, orderliness, leadership.

The briefer, adjectival titles are essentially those used by Dr. Joseph King of Industrial Psychology, Incorporated, and Dr. Laird in his "Sizing Up People;" the titles in parentheses are used throughout research publications.

# APPENDIX G MAGNITUDE OF EXTREME CASES FOR 16 PERSONALITY FACTORS

ERIC And Provided by ERIC

Number and Percent of First-Year 4-H Male and Female Leaders According to Extreme Sten Values for the 16 Personality Factors

16 personality factors	at e	Number ar	d percent

## APPENDIX H CLASSIFICATION OF JOBS OF FIRST-YEAR 4-H LEADERS

### Teaching Jobs

- 1. Train 4-H club members to conduct business meetings--individually
- 2. Train 4-H club members to conduct business meetings--all officers together
- 3. Train 4-H members to lead singing for local 4-H club meetings
- 4. Train 4-H members to lead singing at local 4-H events
- 5. Train 4-H members to lead singing at county 4-H events
- 6. Give talks at local 4-H club meetings
- 7. Give demonstrations at local 4-H club meetings
- 8. Train members to demonstrate
- 9. Train members to judge
- 10. Train members to lead recreation
- 11. Train members to preside
- 12. Train members to keep secretary's book
- 13. Help 4-H members plan local 4-H events such as 4-H parties and achievement nights
- 14. Supervise one or more 4-H community service activities
- 15. Serve as camp counselor
- 16. Show or teach 4-H club members how to do their project work at local 4-H club meetings
- 17. Show or teach 4-H club members how to do their project work in leader's own home but not in club meetings
- 18. Show or teach 4-H club members how to do their project work at member's home but not in club meetings
- 19. Show or teach 4-H members how to fill out their project records in local 4-H club meetings
- 20. Show or teach 4-H members how to fill out their project records in leader's own home
- 21. Show or teach 4-H members how to fill out their project records in member's home
- 22. Show or teach 4-H club members how to do their project work individually
- 23. Show or teach club members how to do their project work as a group
- 24. Show or teach 4-H members how to fill out their project records individually
- 25. Show or teach 4-H members how to fill out their project records as a group
- 26. Discuss individually, with 4-H members for whom the leader is responsible, which 4-H project they should carry
- 27. Discuss as a group with 4-H members for whom the leader is responsible, which 4-H project they should carry
- 28. Discuss individually with members their achievement at end of the project year
- 29. Discuss as a group with 4-H members their achievement at the end of the project year

#### Local Club Organization and Supervision

- 30. Recruit 4-H members
- 31. Assist in getting club started
- 32. Conduct local 4-H business meetings

. .

- 33. Keep discipline in 4-H club meetings
- 34. Persuade 4-H members to get their project work done in time
- 35. Persuade 4-H members to get their record books in on time
- 36. Select individual members to represent 4-H club or to compete in some contest
- 37. Help with local 4-H club fund raising activities for 4-H club work
- 38. Attend local 4-H club committee meetings held at different time than local 4-H club meetings
- 39. Set up arrangements for community 4-H events
- 40. Plan local 4-H events such as 4-H parties and achievement nights
- 41. Attend local 4-H club events
- 42. Chaperone local 4-H club events
- 43. Order materials from firms, magazines, and so forth, for the use of 4-H members
- 44. Ask other adults in community to help with 4-H work
- 45. Chaperone members to 4-H events away from local community
- 46. Enter exhibits at county fair
- 47. Serve on county-wide (or district-wide) 4-H committees of adults
- 48. Fill out forms the county extension office asks for
- 49. Have the club meet in leader's own home
- 50. Attend local 4-H club meetings held outside of leader's own home
- 51. Get project materials needed by 4-H club members
- 52. Get materials needed for local 4-H club events (parties, camp, etc.)

### Chores

- 53. Transport 4-H members to and/or from local 4-H club meetings
- 54. Transport 4-H members to and/or from local 4-H club events
- 55. Transport members to and/or from county 4-H club events
- 56. Transport 4-H members to and/or from district 4-H club events
- 57. Transport 4-H members to and/or from state 4-H club events
- 58. Furnish food for local 4-H club meetings
- 59. Furnish food for local 4-H club events
- 60. Prepare food or help prepare food for local 4-H club meetings
- 61. Prepare food or help prepare food for local 4-H club events
- 62. Transport projects to local 4-H club events
- 63. Transport projects to county 4-H club events
- 64. Transport projects to county fairs
- 65. Transport projects to state 4-H events, fairs and so forth
- 66. Clean up place after community 4-H events
- 67. Clean up and/or arrange exhibit or judging area for members' project work at county fair or county achievement day
- 68. Provide food or other materials for county 4-H events or activities

### Representing 4-H and Promotional

- 69. Assist with radio programs
- 70. Assist with TV programs
- 71. Serve as host family for 4-H club members from other counties or states or IFYE's
- 72. Personally ask community people for money to support some 4-H project or event
- 73. Explain 4-H work at adult meetings such as Grange, PTA, church, and so forth
- 74. Explain to parents what 4-H work is and what is expected of them

### Individual and Special Assistance

- 75. Provide project material for members to use when they forget to bring their own
- 76. Go with 4-H club members to town or elsewhere, to get their project materials
- 77. Do special work on a member's project that has possibility of winning an award
- 78. Counsel older 4-H members on personal problems
- 79. Actually do some of the project work in order to get it finished
- 80. Actually do some of the work on the project records in order to get them finished

### Self-improvement

- 81. Keep up to date on subject matter of 4-H projects which you lead
- 82. Practice the giving of demonstrations before giving them at local 4-H club meetings
- 83. Read the literature sent out or given out, by county extension office
- 84. Attend 4-H leader training meetings in the community
- 85. Attend 4-H district leader training
- 86. Attend county-wide 4-H leader training meetings
- 87. Attend 4-H leader training meetings outside county
- 88. Attend 4-H leader association meetings
- 89. Go to county extension office for materials or help
- 90. Make telephone calls to county extension office for materials or help
- 91. Receive county extension worker in own home to discuss 4-H work

### Morale Building

- 92. Lead singing in local 4-H club meetings
- 93. Lead singing at local 4-H club events
- 94. Lead singing at county 4-H club events
- 95. Lead recreation in local 4-H meetings
- 96. Lead recreation at local 4-H events
- 97. Lead recreation at county 4-H events

### PREFACE

This is a supplementary report to Report No. 12, Study of First-Year 4-H Club Leaders in New York State: Tenure, Characteristics of Leaders and Evaluation of Job Performance by 4-H Agents. It consists largely of tables which present information regarding the performance of jobs by 4-H first-year leaders and the judgments of their 4-H agents and the 4-H state leaders as to whether the jobs should be performed. It is anticipated that the report will provide concrete information for use in training of 4-H agents relative to the tasks of 4-H leaders.

### Introduction

This supplementary report is intended for use in training 4-H agents relative to the tasks of 4-H leaders. The report is divided in four parts: Part I--Distribution of Jobs According to Number of First-Year 4-H Leaders Performing Them and Percent Who Should Have According to Their 4-H Agents: All First-Year 4-H Leaders and Three Types of These Leaders; Part II--Distribution of Jobs According to Number of First-Year 4-H Leaders Not Performing Them and Percent Who Should Have According to Their 4-H Agents: All First-Year 4-H Leaders and Three Types of These Leaders; Part III--4-H Agents' Perceptions of 4-H Leaders' Jobs; and Part IV--4-H State Leaders' Perceptions of 4-H Leaders' Jobs.

The tables contain a large amount of detail, but this was deliberately planned so that study and discussion of 4-H leaders' jobs could be conducted with specific information easily available.

### PART I

Distribution of Jobs According to Number of First-Year 4-H Leaders Performing Them and Percent Who Should Have According to Their 4-H Agents: All First-Year 4-H Leaders and Three Types of These Leaders

### Explanation for using the tables in this part of report:

- 1. Under Job number are the reference numbers for the jobs appearing in the <u>List of Jobs for Use with Supplement to Extension Study No. 12</u> which accompanies this report.
- 2. Under <u>Job type</u> are reference numbers (in parenthesis) appearing in the <u>List of Jobs for Use with Supplement to Extension Study No. 12</u> which accompanies this report.

#### PART II

Distribution of Jobs According to Number of First-Year 4-H Leaders Not Performing Them and Percent Who Should Have According to Their 4-H Agents: All First-Year 4-H Leaders and Three Types of These Leaders

# Explanation for using the tables in this part of report:

- 1. Under Job number are the reference numbers for the jobs appearing in the <u>List of Jobs for Use with Supplement to Extension Study No. 12</u> which accompanies this report.
- 2. Under <u>Job type</u> are reference numbers (in parenthesis) appearing in the <u>List of Jobs for Use with Supplement to Extension Study No. 12</u> which accompanies this report.

#### PART III

4-H Agents' Perceptions of 4-H Leaders' Jobs

# Explanation for using Tables 2, 4, 6, 8, and 10 in this part of report:

1. The numbers in the columns headed by the names of types of jobs are the reference numbers for the jobs appearing in the <u>List of Jobs for Use with Supplement to Extension Study No. 12</u> which accompanies this report.

#### Part III - 4-H Agents' Perceptions of First-Year 4-H Leaders' Jobs

#### A. Organizational Leaders with Projects

- 1. Seventy-nine percent or more of the 4-H agents thought that 49 percent of the 97 jobs should be done by this type of leader, and an equal percent or more of them thought that 23 percent of the jobs should not be done (Table 1). Thus, for 72 percent of the jobs there was relatively high agreement among the agents that the 97 jobs should or should not be performed.
- 2. For this type of leader, self-improvement jobs had the highest percent (91) for total high consensus among the agents. This consensus was confined entirely to should do, with 91 percent of the jobs having 79 percent or more of the agents thinking they should be performed. The second ranking type of job with respect to percent of jobs having total high consensus was local club organization and supervision. Seventy-eight percent of these jobs had a total high consensus among the agents with 70 percent of the jobs having 79 percent or more of the agents thinking they should be performed and eight percent of the jobs having 79 percent or more of the agents who thought they should not be performed.

Throughout Part III of this supplementary report the percentage category, 79+, of agents used to define high consensus-should not is derived by subtracting the 21 percent or less category of agents who thought jobs should be done from 100 percent. In other words, the high consensus for should not do is the reciprocal of the low consensus of should do.

#### B. Organizational-Only Leaders

- 1. Seventy-nine percent or more of the 4-H agents thought that 40 percent of the 97 jobs should be done by this type of leader and an equal percent or more of them thought that 30 percent of the jobs should not be done (Table 3). Thus, for 70 percent of the jobs there was relatively high agreement among the agents that the 97 jobs should or should not be done.
- 2. For this type of leader in the case of both individual and special assistance jobs and morale building jobs, (each with six specific jobs) 100 percent of the jobs included in each category had a high total consensus among the agents. Eighty-three percent of the individual and special assistance jobs were those which 79 percent or more of the agents thought should not be done by leaders, and 17 percent of these jobs were those which 79 percent or more of the agents thought should be done. One hundred percent of the morale building jobs were those which 79 percent or more of the agents thought should not be done. The third ranking type of job with respect to percent of jobs having total high consensus among the agents was chores. All of the high consensus was for should not do with 82 percent of the jobs having 79 percent or more of the agents holding this view.

١

#### C. Assistant Organizational Leaders with Projects

- 1. Seventy-nine percent or more of the agents thought 37 percent of the 97 jobs should be done by this type of leader and an equal percent or more of them thought that 23 percent of the 97 jobs should not be done (Table 5). Thus for 60 percent of the jobs there was relatively high agreement among the agents that the 97 jobs should or should not be done.
- 2. For this type of leader morale building jobs had the highest percent (84) for total high consensus among the agents. This consensus was confined entirely to should not do, with 84 percent of the jobs having 79 percent or more of the agents thinking they should not be performed. The second ranking type of job with respect to percent of jobs having total high consensus among agents was self-improvement. All of the high consensus was for should do with 82 percent of the jobs having 79 percent or more of the agents holding this view.

## D. Assistant Organizational-Only Leaders

- 1. Seventy-nine percent or more of the agents thought that 34 percent of the 97 jobs should be done by this type of leader and an equal percent or more of them thought that 31 percent of the jobs should not be done (Table 7). Thus, for 65 percent of the jobs there was relatively high agreement among the agents that the 97 jobs should or should not be done.
- 2. For this type of leader in the case of both individual and special assistance jobs and morale building jobs (each with six specific jobs) 100 percent of the jobs included in each category had a high total consensus among the agents. Eighty-three percent of the individual and special assistance jobs were those which 79 percent or more of the agents thought should not be done, and 17 percent of these jobs were those which 79 percent or more of the agents thought should be done. One hundred percent of the morale building jobs were those which 79 percent or more of the agents thought should not be done. The third ranking type of jobs with respect to percent of jobs having total high consensus among the agents was chores. All of the high consensus was for should not do, with 75 percent of the jobs having 79 percent or more of the agents holding this view. The fourth ranking type of job with respect to percent of jobs having total high consensus among the agents was selfimprovement (eight specific jobs). All of the high consensus was for should do, with 73 percent of the jobs having 79 percent or more of the agents holding this view.

### E. Project-Only Leaders

- 1. Seventy-nine percent or more of the 4-H agents thought that 35 percent of the 97 jobs should be done by this type of leader and an equal percent or more of them thought that 30 percent of the jobs should not be done (Table 9). Thus for 65 percent of the jobs there was relatively high agreement among the agents that the 97 jobs should or should not be done.
- 2. For this type of leader the morale building jobs (includes six specific jobs) had 100 percent of its jobs with total high consensus among the agents. All of the high consensus was for should not do, with 100 percent of the jobs having 79 percent or more of the agents holding this view. The second ranking type of job with respect to percent of jobs having total high consensus among the agents was self-improvement. All of the high consensus was for should do with 82 percent of the jobs having 79 percent or more of the agents holding this view. The third ranking type of job. with respect to percent of jobs having total high consensus among the agents was chores. All of the high consensus was for should not do with 75 percent of the jobs having 79 percent or more of the agents holding this view.
